

Ck040h Quick Connect Couplings

CUPLA enable flexible and fast connections in various fluid lines.

Nitto Kohki's unique technologies and dedicated research have been proven by numerous patents, which led to the development of 25,000 different CUPLA variations.

Nitto Kohki's quick connect couplings, "CUPLA" enable speedy connections/disconnections of various pipings, such as air, water, oil and gas.

They are active in various industrial fields, thanks to the experience in development of 25,000 different variations. Wide varieties of body materials such as steel, brass, aluminum, stainless steel and plastic are available to match every customer's needs.

Applications diversify from general household to high-tech industries such as in oceanic and space development. Numerous sizes are available for various needs.

Wide varieties of body materials such as steel, brass, plastic, aluminum or stainless steel are available.

A profusion of patented technology crystallized in global users recognition of high quality and high performance. ISO 9001 and 14001 Certification Award

"CUPLA" quick connect couplings are produced as the crystallization of high-grade know-how nuttured in the fields of fluid engineering and materials engineering, and top level precision machining technology. Having assessed Nitto Kohki consistent quality assurance and control system ranging from design and development through procurement of material, manufacture, assembly, and shipping, the Japan Quality Assurance Foundation, authority for inspection and registration, awarded us "ISO 9001", international standard for quality management systems, and "ISO 14001", international standard for environment management systems intended to perform global environment preservation and pollution control. High reliability built on unparalleled "high quality" and accumulated history of "productivity" for stable supply. CUPLA is receiving overwhelming support from many users spread all over the world as the top brand for fluid energy transmission and control.

Quick Connect Couplings

For easy replacements	Replacements of pneumatic / hydraulic tools, pneumatic / hydraulic cylinders, mold attachments, etc.
For temporary installation in test line	Vacuum tests, pressure durability tests, leakage tests, running tests, etc.
For filling	For filling up various industrial gases, including inert gases, nitrogen, LPG, carbon dioxide, oxygen, fuel gas, etc.
For maintenance services	For computer cooling system, hydraulic cylinders in die-casting machines.

Nitto Kohki's Official YouTube channel

Watch our products in action. We have various products from Quick Connect Couplings "CUPLA" to Power and Machine Tools, "delvo" Electric Screwdrivers, Electric Screwdrivers, Linear-motor-driven Free Piston Pumps and also Door Closers.

www.youtube.com/c/NittoKohkiGLOBAL

Beware of imitations

Recently on the market, there have appeared similar products that invite misidentification or confusion with Nitto Kohki couplings, or such products that claim to have compatible mating parts. Nitto Kohki cannot accept responsibility for any accident that may result by mixed use with a coupling of another brand that seems connectable to a Nitto Kohki coupling. Nitto Kohki CUPLA are produced with their own unique tolerances and precision under strict quality control, and are not interchangeable with other couplings that are not under such tolerances. Therefore, connection to other brand of coupling may end up with abrupt breakdown or personal injury. Please be sure to check for our marks below, which are always inscribed on Nitto Kohki CUPLA products, when you order and purchase.

Quick connect couplings for air / water piping

Nitto Kohki's environmentally-friendly Manufacturing

The coexistence of mankind and nature. Each company is now asked for a global level environmental conservation and improvement as important themes. As a part of the environmental improvement activities, we are offering various products such as "couplings", "machines and tools", "screwdrivers", "air compressors and vacuum pumps", and "door closers" as green procurement products.

"CUPLA" active in the widespread field of the manufacturing industry. Coupling for fuel cell vehicles. **HHV CUPLA** CUPLA for fueling high pressure hydrogen ECO Fuel cell vehicles are one of the remarkable environmental conservation solutions. In order to respond quickly to environmental problems. Nitto Kohki has developed the first coupler in Japan to supply and fill its fuel source, high-pressure Welding / Cutting neumatic draulic CUP pure hydrogen piping piping piping Mold temperature Semiconductor Aerospace control piping manufacturing industry Nitto Kohki's environmentally-friendly Manufacturing Green Procurement

Nitto Kohki has made every effort in developing "Environmental Improvement Plans" through the implementation of ISO14001, to execute environmentally conscious business activities on a company-wide basis. As a part of our ongoing commitment to the environment, we are also commited to reduce and/or exclude restricted chemical substances from our products as designated by RoHS directives, laws and regulations of chemical substances.

All couplings except for the following products have been switched to green procurement compliant products.

- LEVER LOCK CUPLA
- All CUPLA products with Tube Fitter
- CUPLA CONNECTING JIG

- PRESSURE GAUGE

Please visit our website for applicable products.

Non compliant

www.nitto-kohki.co.jp/e/

Note: Color of plating

The color of the zinc chrome plating is yellow, while nickel plating is silver. Some products may look different in appearance when changed.

Select an Appropriate CUPLA for the Job

Nitto Kohki has the wide range of CUPLA products covering almost every application and feature you need. In order to select an appropriate CUPLA for your job, you need to realize the following specifications.

Specifications to Be Checked When Selecting CUPLA

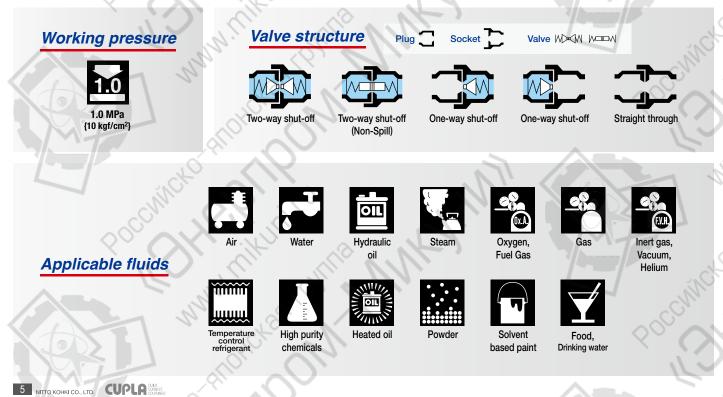

Fluid and the Temperature	Select a CUPLA with body and seal materials that suit the fluid and its temperature.	There are different body and seal materials to suit different fluids. For example, we recommend steel HI CUPLA for air, and brass or stainless steel for water. Please refer to Body Material Selection Table and Seal Material Selection Table at the end of this catalog for details about the correspondence between fluids and materials.
Fluid Pressure	Select a CUPLA suitable for the actual Maximum. fluid pressure.	Fluid pressure is also a key to CUPLA selection. Each series of hydraulic CUPLA have different structures to cope with each pressure resistance ranges up to 68.6 MPa (700 kgf/cm ²).
Automatic Shut-off Valve	Select a CUPLA with a valve structure that suits the piping application.	Valve combinations are two-way shut-off, one-way shut-off, or straight through types. Choose carefully. Unless it is a two-way shut-off type, the internal fluid will flow out from the CUPLA without valve when it is disconnected.
Operating Environment	Select a CUPLA with design and materials that suit each operating environment.	In choosing the type of CUPLA, body material and seal material, consider the temperature range, and/or corrosive atmosphere in the operating environment.
Size and Type of End Configurations	Finally and critically specify the size and type of end configurations.	Having checked the type and materials for the CUPLA, now specify the size and type of end configurations to suit the type of piping. Choose carefully, as the size affects the fluid flow rate.

You can search our "CUPLA" at our web site. (www.nitto-kohki.co.jp/e/) Please take a visit. If you cannot find a suitable "CUPLA", please contact us via our web site or enter the above details in the "CUPLA Inquiry Form" at the end of this catalog and send it to us by fax or post.

Symbols

Quick reference symbols:

(1) Working pressure, (2) Type of valve structure, (3) Applicable fluids, are given on each product page to help you to quickly select a suitable CUPLA. Please use them as the guide to grasp each type selection.

Glossary

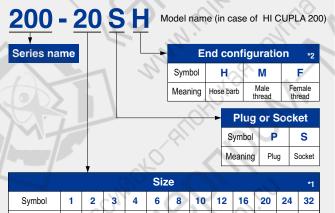

The following terms are used in detailed information pages of each CUPLA. Refer to these terms when checking CUPLA specifications.

International System of Units (SI Units) Units stated in this catalog are based on SI Units. The old units, which are non-SI Units, are also written within parentheses side by side with SI Units for reference only.

Glossary

The Meaning of Each Letter in the Model Name

The model name of a CUPLA indicates its size, whether plug or socket, and the end configuration. Rated pressure is also shown for some hydraulic couplings. Check the following tables to understand the model name implication before making your selection.

 Nominal diameter
 $1/8^{"}$ $1/4^{"}$ $3/8^{"}$ $1/2^{"}$ $3/4^{"}$ $1^{"}$ $1/4^{"}$ $1/2^{"}$ $3^{"}$ $4^{"}$

 1
 To diameter
 1
 $8^{"}$ $1/2^{"}$ $3/4^{"}$ $1^{"}$ $1/2^{"}$ $2^{"}$ $2^{1}/2^{"}$ $3^{"}$ $4^{"}$

*1: The digit numbers of models for some products differs from those of symbols. For example, in case of HI CUPLA 20SH, not "20" but only "2" of the "20" corresponds to "2" of the symbol and indicates the nominal diameter of 1/4".

*2: For a product with only one type of end configuration, this symbol is omitted. For example, 210 CUPLA have only female threaded end so the model indicates only the size and plug or socket identification.

Body Material

This indicates the material that is used for the plug body or socket body that forms the flow path of fluid through the CUPLA. Some products have internal components of a different material. Please check with us for details.

Body N	laterial	Major applicable fluid		
Common name	Mark			
Brass	BRASS	Air, Water, Oil		
Iron, Steel	STEEL	Air, Oil		
Stainless steel	SUS	Air, Water, Oil		

Please refer to Page 158 for body material selection table.

Size

This indicates the nominal size of the pipe thread connection or of the hose to be used.

Working Pressure

The normal allowable fluid pressure under continuous use. Exceeding the working pressure may cause damage and leakage.

Pressure Loss

This shows the loss of pressure when fluid runs through the CUPLA set. They are measured values at our testing facilities. May differ according to the installation/piping method and operating conditions.

Minimum Cross-Sectional Area

This shows the minimum cross-sectional area of the fluid path when the CUPLA is connected. The position is different in some products.

Seal Material

This shows the material used to seal the CUPLA, usually an O-ring. The standard material is nitrile butadiene rubber. For materials other than those shown below, please specify such as silicone (SI), butyl (IIR), Kalrez (KL) or rubber for food, depending on your application.

Properties of	rubbers	used for	O-rings
---------------	---------	----------	---------

	Fropenties of rubi	Jeis use	u ioi O-iiiiys				
١	Seal materia	l	Working				
١	Common name	Nitto Kohki symbol	Temperature Range	Features			
	Nitrile rubber (SG)		-20°C to +80°C	Standard seal with excellent oil resistance.			
	Hydrogenated	HNBR	-20°C to +120°C	Compared with the standard nitrile rubber, the seal material is more heat and weather resistant.			
	nitrile rubber	HNBR (H708)	-20°C to +120°C	In addition to the above features, the seal material can also be used for refrigeration oil and refrigerant applications such as HFC-134a. (The seal material is employed only in SP-V CUPLA and PCV PIPE CUPLA.)			
	Fluoro rubber	FKM (X-100)	-20°C to +180°C	Excellent for heat, weather, and oil resistance. Applicable to wic range of applications.			
	Chloroprene	CR (X-306)	-20°C to +80°C	Excellent weather resistance.			
	rubber	CR (C308)	-20°C to +80°C	In addition to the above features, the seal material can also be used for refrigeration oil and refrigerant applications such as HFC-134a.			
	Ethylene-propylene tePDM (EPT)		-40°C to +150°C	Excellent resistance to steam and hot water, also excellent resistance to weather and ozone.			
1	Perfluoroelastomer	Р	0°C to +50°C	Excellent resistance to chemical and solvents.			

Note: Even among rubber materials of the same category, the working temperature range differs depending upon the design of the CUPLA. For details, see the specifications of each CUPLA series. As for the Nito Kohki symbol for rubber material, fluoro rubber is designated as "FKM" or "X-100" for example. The above are general features, but the seal resistance depends on fluid temperature, fluid concentration, and additives contained in the fluid.

Working Temperature Range

This shows the minimum and maximum working temperature range of the seal material used in the product.

Continuous use at the minimum or maximum temperature is not recommended. Please contact us for consultation.

Valve Structure

-			
Two-way shut-off		Automatic shut-off valves are mounted in both plug and socket. The valves prevent spill out of fluid from the lines on disconnection.	
Two-way shut-off (Spill Reduction)		"Two-way shut-off" with spill reduction design allows extremely little admixture of air on connection and minimizes fluid spill out on disconnection.	
One-way shut-off		This design prevents fluid outflow only from the socket side on disconnection. Also available are plugs with an automatic shut-off valve.	
Straight through	→	Shut-off valve is equipped neither in plug nor in socket. Fluid flows out from either side on disconnection.	

Suitability for Vacuum

Indicates if the CUPLA has necessary performance required for vacuum applications. (Note that the performance in connected state differs from that of disconnected state.)

Interchangeability

Indicates whether the plug or socket of different series, types or models can be connected with each other.

Maximum Tightening Torque, Tightening Torque Range

Considering the balance between possible leakage caused by loose fit and too much structural stress when a CUPLA is mounted on a workpiece, the appropriate screw-in torque value or range is suggested by the maker.

Flow Direction

The design of some couplings may restrict the fluid flow direction to one way only. Check the suggested direction before installing.

Semi-standard CUPLA Series

"Semi-standard CUPLA Series" are products with an already established record but are not standard stock items.

Accessories

Special Made-to-Order CUPLA

Nitto Kohki is developing couplings with various functions and specifications to suit respective user's applications. The CUPLA products on this page are examples of such. Special made-to-order couplings are supplied based upon the specific instructions / specifications detailed by the customer. Once written acceptance of our final drawing / specifications of the CUPLA is received from the customer we formally accept this as a final order. It is essential, as the customer, to carry out a performance test of the special made-to-order CUPLA, in its specific usage conditions, for assurance of safety and adaptability to the hoses, pipes or devices used in the application. Use of the made-to-order CUPLA in any application or condition other than those specified in the design drawing, will exclude Nitto Kohki from any liabilities for any special, indirect or consequential loss or damages. Index

Examples of air line connections using HI CUPLA group models

Air distribution is one of the typical piping systems. Various HI CUPLA Series models meet all needs of air piping from main supply, relays in factories, pipe end connections to pneumatic tools, and those of air piping within equipment. The following sketch gives you some examples of air piping using HI CUPLA Series and may serve as a good reference in selecting appropriate CUPLA products.

## **For Low Pressure**

# **MICRO CUPLA**

### For piping in pneumatic control devices

# Compact, lightweight CUPLA with only 9.5 mm outer diameter. Push-to-connect operation. Tube Fitter type for even easier tube insertion.

- Even though the valve is built in the socket, the sleeve outer diameter is confined to 9.5 mm.
- Push-to-connect design.
- Compact design for piping in narrow spaces.
- Plated brass and stainless steel bodies are available for excellent corrosion resistance.
- Available in various end configurations to satisfy a wide range of pneumatic applications.
- Note: Fluid will flow out from the plug side when disconnected. Take necessary precaution if the fluid is water.

9.5 mm OD sleeve

Push-to-connect design

Wide variety of end configurations

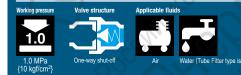

CUPLA NITTO KOHKI CO., LTD. 24

# **For Low Pressure**

# **SMALL CUPLA**

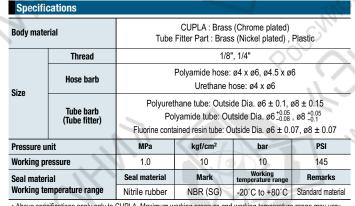

Lightweight and compact for use on air lines and scientific equipment

insuitable for water

# Lightweight and compact push-toconnect operation. Responding to requirements of modular combinations.

- Compact socket with built-in valve and 14 mm OD sleeve. Suits applications calling for compact and modular components.
- Just push in the plug to the socket for connection by easy one hand operation.
- Plated brass for corrosion resistance adopted for the body. Stable performance for long life.
- A wide line-up of end configurations (female and male threads, hose barbs, manifolds) enables suitability with a wide range of piping applications such as pneumatic, scientific and medical equipment.
- Also available with quick connect/disconnect Tube Fitter type.
- Note: Fluid will flow out from the plug side when disconnected. Take necessary precaution if the fluid is water.

Above specifications apply only to CUPLA. Maximum working pressure and working temperature range may vary
depending on tube materials you use with and the working temperature.

Maximum Tightening To		Nm {kgf•cm}

## **For Low Pressure**

# **CUBE CUPLA**

# Both socket and plug have built-in valve types and valveless types. Simple one action for connection or disconnection. Lightweight plastic coupling.

- In all five color variations to prevent piping mistakes.
- Ultra-lightweight, made of polyacetal resin. Compact design for space saving.
- Just push plug into socket for connection. Simply press the button on the socket for disconnection.
- Two-way shut-off type with valve on both sides and straight through type with low pressure loss are available.
- L type plug ideal for piping in narrow spaces are available.
- Socket and plug cannot be disconnected unless two buttons on the socket are pressed simultaneously.

Specifications			States -

- Resin (POM) such as the main body ... Conforms to article No.3-D-2-(2)-2 and has passed both material and elution tests specified in the Food sanitation Act and the standards For Food and Food additives (Notice No. 370 of 1959 issued by the Ministry of Health and Welfare of Japan).

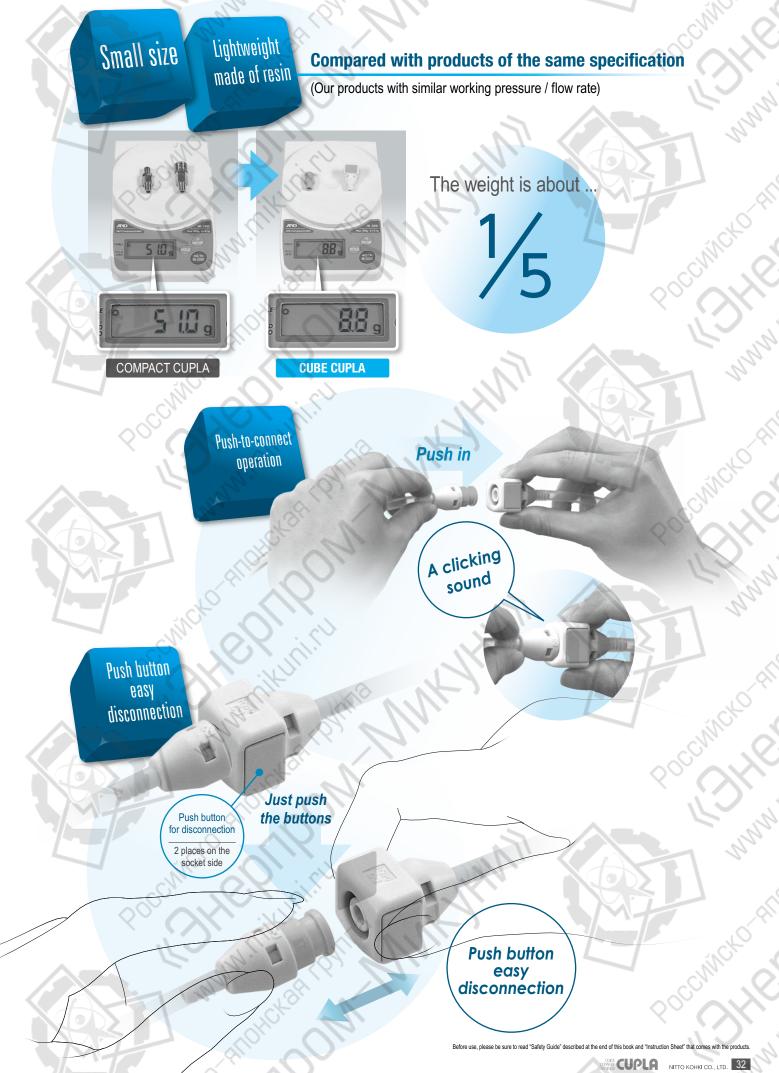

O-ring (NBR) ... Conforms to article No.3-D-3-(1) and has passed both material and elution tests specified in the Food sanitation Act and the standards For Food and Food additives (Notice No. 370 of 1959 issued by the Ministry of Health and Welfare of Japan).

2

Silicone type grease (NSF H1, NSF 61 registered product) is applied to the sealing material.

- The CUPLA should be evaluated before use to determine the suitability with applications that require sanitation control.

### CUBE CUPLA

# For Low Pressure (Air)

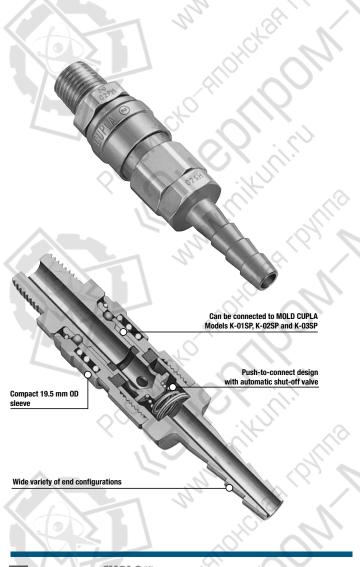

# **SUPER CUPLA**

Light, compact for air piping connections

# The lightweight design makes the CUPLA best suited to power tools! Push-to-connect for easy operation.

- Lightweight design suits direct connection to power tools.
   Aluminum body is adopted for some models to reduce the weight.
- Just push the plug into socket for easy one hand connection.
- Available in various end configurations for a wide range of pneumatic applications.
- $\bullet$  Model 02S20P can be connected with sockets of HI CUPLA Models 10, 17, 20, 30 and 40.
- Also available with quick connect / disconnect Tube Fitter type.

# **HI CUPLA**

### Universal purpose couplings for air lines

# From factory air line to pneumatic tool connection, available in various body materials, sizes and end configurations. Excellent durability.

- An excellent general purpose coupling for connecting factory air supply to pneumatic tools.
- Steel coupling is suitable for air. Brass or stainless steel is suitable for water. Note that fluid will come out from the plug when disconnected.
- Critical structural parts of steel models are heat-treated for increased strength giving greater durability and resistance to wear.
- Available in various body materials, sizes and end configurations applicable to a wide range of applications.

**Application Example Pneumatic tools** 

All of socket, plug and tube can be connected in one push-to-connect operation. Just push the tube into CUPLA and then it is locked. PC type (Tube Fitter) Polyurethane, Nylon and Fluorine contained resin tube

Before use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the produ

## **For Low Pressure**

# **HI CUPLA BL**

Universal purpose couplings with sleeve lock mechanism for air lines

## Sleeve-lock mechanism is engaged by rotating the sleeve after connection.

- · Sleeve-lock mechanism prevents accidental disconnection.
- An excellent general purpose coupling for connecting factory air supply to pneumatic tools.
- Steel coupling is suitable for air. Stainless steel is suitable for water. Note that fluid will come out from the plug when disconnected.
- · Critical structural parts made of steel are heat-treated for increased strength giving greater durability and resistance to wear.
- Various body materials, sizes, and end configurations are available.
- · SN-BL type for connection to urethane hose requires no hose clamp.

# HI CUPLA 200

## Push-to-connect type for air lines

## Simple and secure push-to-connect type! Big flow rate! End-face seal design. Gives excellent handling touch.

- Just push the plug into the socket for simple and secure connection. This reduces connection time and improves efficiency.
- New valve design for low pressure loss to achieve flow rate increase (15% up over the conventional model).
- End-face seal is achieved when connected.
- Enhanced operability with low connection resistance.
- End-face seal design is superior to external seal with an O-ring due to no seal damage caused by exhausted lubrication.
- Available only with steel body. Not suitable for water or oil.
- Also available with quick connect/disconnect Tube Fitter type.

**HI CUPLA for Connection to Braided Hoses NUT CUPLA NUT CUPLA 200 ROTARY NUT CUPLA** For connection to urethane hose, braided hose

## No hose clamp required! Fitted with hose guard nut to prevent possible kinking. **HI CUPLA for connection to braided** hoses is now available.

- Nut types are available in HI CUPLA Series and HI CUPLA 200 Series. Hose guard nut type available to prevent hose kinking.
- To mount on hose, simply slide it over the nipple and tighten the nut.
- The design to tighten outside of hose reduces hose slip away or fluid leaks.
- Also available are ROTARY NUT CUPLA equipped with ball bearing swivel mechanism to prevent and relieve tension on operator's hands.

Maximum working pressure and temperature range of PN/SN type for braided hoses depends upon the specification of the braided hose to be used.

Tightening Torque Range Nm {kgf · cm]							
Model	SN, PN, SNR Type	65SNG, PNG, SNRG Type	85SNG, PNG, SNRG Type				
Torque	9 to 11 {92 to 112}	5 to 6 {51 to 61}	7 to 8 {71 to 82}				

To mount on braided hose or urethane hose, slide it over to the hose barb and tighten the nut until it flush against the hose barb base. It is recommended that grease is applied to the inside of the nut (threaded part and hose contact part) for easy tightening.

## Flow Direction

Fluid must run from socket to plug.

### Interchangeability

Interchangeable with HI CUPLA models 10, 17, 20, 30 and 40. Interchangeable with each models of NUT CUPLA series and HI CUPLA series (except models 400, 600, and 800) Please see page 19 for "HI CUPLA Series Interchangeability".

# **LOCK CUPLA 200**

Air line coupling with sleeve safety lock feature

## Push-to-connect operation. Added easy lock design for safety!

- Locking mechanism prevents accidental disconnection after connection. Good for connections between hoses.
- Simple one push of plug and socket to each other for connection. Easy handling improves job efficiency.
- Ball bearing swivel mechanism prevents hose twists and relieves load on holding hands (SNRG type).
- To mount on hose, simply slide it over the nipple and tighten the nut (SNRG type).
- Hose guard nut to prevent hose from kinking as a standard feature (SNRG type).
- Low pressure loss valve design gives improved flow rate.

## Application Example

Applicable fluid Air Application

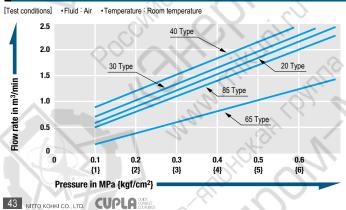

Pneumatic tools, Pneumatic devices, Various air piping

## Air flows in either direction from plug or from socket side when coupled. Ideal for connection of factory air supply lines to pneumatic devices.

- Can be connected with plugs for HI CUPLA Models 10, 17, 20, 30 and 40 and allows fluid to flow from either plug or socket side when coupled.
- Wide range of connections such as from ports on air pipes in factory to individual pneumatic devices.
- Critical structural parts are heat-treated for increased strength giving greater durability and resistance to wear.
- Available in various sizes and end configurations to suit a wide range of applications.

# **FULL-BLOW CUPLA**

Air line coupling with low pressure loss and high flow rate

## Unique full-open gate type valve mechanism realizes low pressure loss and high flow rate, which reduces required source air volume.

- The flow rate is increased by up to 40% more than that of conventional CUPLA.
- During connection and disconnection, the valve is closed, enabling connection/disconnection under zero line pressure.
- When the sleeve of socket is returned to its original position, the purge mechanism releases the residual air pressure in the plug, eliminating unpleasant popping noise and hose whip motion on disconnection.
- Built-in sleeve lock mechanism prevents accidental disconnection of CUPLA, ensuring safe operation.
- The valve can be opened and closed while the socket and plug are connected.

The weight is reduced by 30 to 45% compared with that of conventional CUPLA.
 Note: Direct mounting of FULL-BLOW CUPLA to percussive and vibrating tools should be avoided.

## Suitability for Vacuum

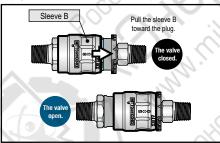

Not suitable for vacuum application in either connected or disconnected condition.

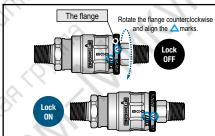

45 NITTO KOHKI CO., LTD. CUPLA DUK

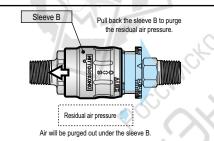

plug you cannot disconnect.

To disconnect the plug, first turn the flange back to its original position for unlocking and then pull the sleeve B back to the original position. The built-in valve will be closed to purge the residual air pressure

Before use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the product

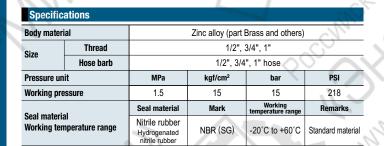

# **PURGE HI CUPLA PVR** Type

Air line coupling with built-in residual air pressure release function

## **Connection can be made smoothly** regardless of the existing pressure inside the socket.

- Push-to-connect operation. Easy one-hand operation.
- · Built-in sleeve lock mechanism prevents accidental disconnection of CUPLA, ensuring safe operation.
- . Upon completion of sleeve locking the valve will open to supply air.
- . When the sleeve is turned back to its original position, the valve is closed and purges residual air pressure in the plug without unpleasant popping noise and hose whip motion on disconnection.
- · Even after connection, valve opening/closing control is possible.
- Flow rate increases by approximately 20% over that of HI CUPLA Model 400SM.
- Can be connected with plugs for HI CUPLA Models 400, 600 and 800.

Maximum Tightening To	Clobs	Nm {kgf•cm}

## Function of PURGE HI CUPLA PVR Type

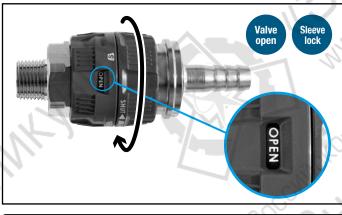

1. Connection

Valve opening/closing operation and plug connection to socket can be made independently. Push-to- connect operation is achieved regardless of existing pressure inside the pipe.

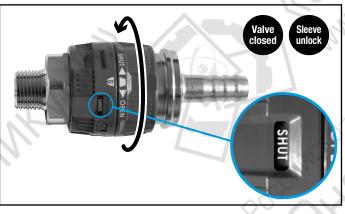

## 2. Open the valve and lock the sleeve.

Turning the operation ring will open the valve in the socket to supply air and lock the sleeve to prevent accidental disconnection.

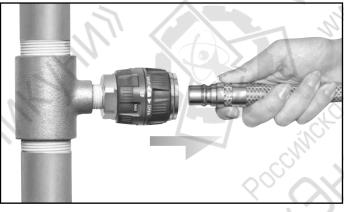

## 3. Close the valve and unlock the sleeve

Turning the operation ring back to its original position will close the valve and stop air flow, release the residual air pressure in the plug, and unlock the sleeve.

## 4. Disconnection

Disconnection can be made without unpleasant popping noise and hose whip motion due to no residual air pressure inside the plug.

Before use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the products

# **PURGE HI CUPLA**

Air line coupling with residual pressure release function

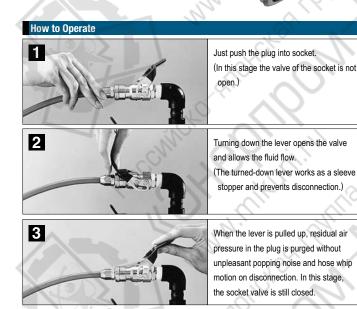

## Push-to-connect operation even with existing internal pressure! Eliminates unpleasant popping noise and hose whip motion on disconnection.

- Just push in the plug for connection regardless of internal pressure in socket.
- Even after connection, lever operation gives perfect control over valve opening/closing.
- In disconnection, lever action releases residual air pressure in the plug without unpleasant popping noise and hose whip motion.
- · Safe design prevents leveroperated valve from opening when plug is not connected.

Can be connected to correspondi HI CUPLA plugs

Push-to-connect design

Lever action opens / closes the valve in the CUPLA

# **PURGE LINE CUPLA**

Simple air line coupling manifold with residual pressure release function

## Residual pressure can be released by a mere lever turn. Very smooth connection/disconnection!

- Single action, just push in the plug to connect regardless of internal pressure in socket.
- No unpleasant noise of air pressure discharge and no hose whip motion on disconnection for safety operation.
- Safe design socket valve will not open or close unless plug is connected.
- Even after connection, a lever turn will open/close valve with perfect control of air flow or line shut-off.
- Enables simultaneous air supply to three outlets from a single air line. (A single outlet PURGE HI CUPLA is also available – see the pages of PURGE HI CUPLA for details.)

# **ROTARY LINE CUPLA**

Simple design air line couplings on free turn manifold

## Each air outlet can be turned freely to any angle independently.

- Multiple outlets are available from single air supply source.
- Sideway air outlets are rotatable to any angle. Possible hose twists can be eliminated by the component couplings' swivel mechanism.
- . Choose either RT type (2 outlets) or RE type (3 outlets) to suit your application.

CUPLAS NITTO KOHKI CO., LTD. 54

## For Low Pressure (Air) ROTARY FULL-BLOW LINE CUPLA

Free rotating branch air line coupling with low pressure loss & high flow rate

# Each air outlet can be turned freely to any angle independently.

- Multiple outlets are available from single air supply source.
- Sideway air outlets are rotatable to any angle.
- Choose either RT type (2 outlets) or RE type (3 outlets) to suit your application.
- The flow rate increases by 40% to 50% over that of conventional CUPLA.
- During connection and disconnection, the valve is closed, enabling connection/disconnection under zero line pressure.
- When the sleeve of socket is returned to its original position, the purge mechanism releases the residual air pressure in the plug, eliminating unpleasant popping noise and hose whip motion on disconnection.
- Built-in sleeve lock mechanism prevents accidental disconnection of CUPLA, ensuring safe operation.
- The valve can be opened and closed while the socket and plug is connected.

## **For Low Pressure**

# **HI CUPLA ACE**

Lightweight plastic coupling with automatic safety lock for air line applications

## The weight is merely a quarter of steel HI CUPLA's and smooth push-in connection is achieved. Sleeve lock mechanism for safety operation.

- Pressure ratings comparable to steel CUPLA.
- A built-in "lock mechanism" locks the sleeve upon connection, thus prevents accidental disconnection.
- Just push plug into socket for simple connection.
- The weight is a quarter of steel HI CUPLA for easy handling.
- Can be used for air and water.
- Air flows in either direction from plug or from socket side when coupled.
- Plug and socket with hose guard nut are also available (see page 64 of NK CUPLA HOSE / NK CUPLA COIL HOSE for details).

# **ROTARY PLUG**

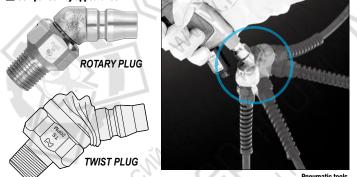

## For pneumatic tools and devices

## Newly developed rotary function allows 360° swivelling! Big improvement for handling of pneumatic tools!

- · Rotary neck plug for hose connection to pneumatic tools and pneumatic devices.
- Fits at 45° angle to the tool eliminating annoying offset load caused by connected hose.
- Ideal compact design enables optimum workability by simple body structure. Now far lighter and smaller than conventional models.
- New dust-proof design for increased durability.
- · For air tackers, nailers, impact wrenches and other pneumatic tools.

# **TWIST PLUG**

## For pneumatic tools and devices

## Eliminates hose twisting, kinking, or bending! Greatly improves working efficiency!

- A plug with a free twisting neck for hose connections to pneumatic tools and devices.
- Free angle control (max.70° flexible) provides comfortable job positions, even in narrow spaces or with overhead works.
- The flexible part is reinforced with self-lubricating plastics to give smooth bending action and excellent durability.
- Dust protector over the flexible part prevents dirt and swarf from entering.

# **PURGE PLUG**

## For air lines with purge mechanism

## **Eliminates unpleasant** popping noise and hose whip motion when **CUPLA** is disconnected.

- . When the CUPLA is disconnected, the pressure left in the plug side hose is released gradually without unpleasant popping noise and hose whip motion.
- Unique design of air purge system enables the residual pressure release quickly and quietly.
- A unique but simple purge valve design is good for long and repeated use.
- The function is assured even under a high supply pressure or with a long hose. Note: This product is not a check valve to totally stop the air flow.

# ANTI-VIBRATION PLUG HOSE

Plug hose for vibrating and percussive air tools

# Protects the CUPLA from shock generated by vibrating tools and impact tools.

- Optimizes life and prevents wear of "CUPLA" by absorbing strong shocks generated by connected vibrating tools.
- Prevents hard-to-notice flow reduction caused by "CUPLA" wear under continuous vibration.
- Flexible rubber hose allows free and wide range of tool motion.

### **Suitability for Vacuum**

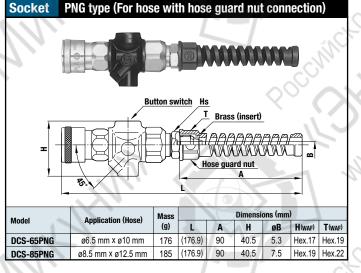

Not suitable for vacuum application in either connected or disconnected condition.

## For Low Pressure

# **MINI CUPLA**

Standard type for use on equipment for welding and gas cutting, etc.

## Exclusively for oxyacetylene equipment. Many variations with higher flow rates!

- · From cylinders to torches, all piping connections associated with welding and cutting equipment are push-to-connect operations.
- Double-lip seal prevents minor leak during connection. Oxygen and fuel gas CUPLA have different sizes to prevent accidental interconnection.
- Pressure loss is minimized to achieve higher flow rate.
- · Various types of end configurations have been standardized to comply with a wide range of welding and cutting equipment

applications. Sockets themselves or plugs themselves are interchangeable with **MINI CUPLA SUPER's** counterparts.

 LINE CUPLA MINI is also available for multiple piping.

oxygen and fuel gas

Plugs with backflow stop valve in MINI CUPLA are designed exclusively for gas welding/cutting to prevent occurrence of gas mixing. Possible backflow of gas during operation can be stopped by cutting the back flow into the cylinder or line. Such valve is adopted in both fuel gas and oxygen plug ding/cutting vina the structur top valve (anto To operate at approx. 0.1 MPa {1 kgf/cm²

## **For Low Pressure**

# **MINI CUPLA SUPER**

Heavy-duty push-to-connect type for oxyacetylene piping

# Exclusively for welding and cutting equipment.

- From cylinders to torches, all piping connections associated with welding and cutting equipment are push-to-connect operations.
- Plated body for better corrosion resistance.
- Heat-treated plugs for better durability.
- Oxygen and fuel gas CUPLA have different configuration sizes with sleeves in different appearances, silver colored plating for oxygen and copper colored plating for fuel gas, to prevent accidental interconnection.
- Smaller diameter design enables wider range of applications.
- Various types of end configurations have been standardized to comply with a wide range of welding and cutting equipment applications. Sockets themselves or plugs themselves are interchangeable

with MINI CUPLA's counterparts.

> Different CUPLA sizes and sleeve colors prevent accidental interconnection of oxygen and fuel gas

> > Can be connected with MINI CUPLA

Heat-treated steel plugs

# **MOLD CUPLA**

General purpose and mold coolant port coupling

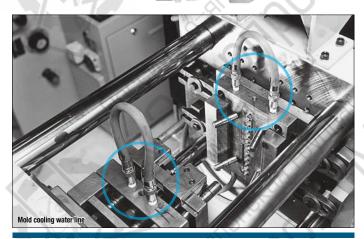

## **Designed for quick replacement** for die and mold ! **Rust resistant models having** many variations.

- · Space saving design for molds with closely spaced coolant ports.
- · Long sleeve socket facilitates connection/disconnection with plug embedded in mold.
- Enables quick mold cooling water line connection/disconnection.
- Various sizes and end configurations to suit a wide variety of mold applications.
- . Can be connected with SUPER CUPLA, excluding K3 and K4 types.
- Push-to-connect design. (Built-in automatic shut-off valve in the socket) Also available is CUPLA without valve (Please specify in ordering).
- CUPLA for braided hose connection requires no hose clamp. (Model K-90SN)

**For Low Pressure** 

# MOLD CUPLA High Flow Type

## High flow type mold coolant port coupling

# Flow rate has doubled to increase productivity.

- High flow type K3 and K4 series are added to MOLD CUPLA series for mold coolant and heated oil port coupling.
- Almost double flow rate compared with our standard K-01, K-02 and K-03 series, increasing productivity.
- Space saving design for molds with closely spaced coolant ports.
- Long sleeve socket facilitates connection / disconnection with plug embedded in mold.
- Enables quick mold coolant hose connection / disconnection.

## Results of reduced cooling time in the field

A customer replaced conventional K-0 series MOLD CUPLA with the K3 series and shortened the cooling time from 30 seconds to 21 seconds meaning an 18% reduction per shot and increased productivity by 20%. Temperature checks at 8 positions on the mold showed that surface temperatures on average had fallen by 3°C, providing evidence of the high cooling efficiency.

## Flow comparison

Coolant water flow rate was checked with a flow meter, which confirmed increase by 1.7 to 1.8 times, when MOLD CUPLA K3 series are used.

**For Low Pressure** 

# **LEVER LOCK CUPLA Metal Body / Plastic Body**

# For bulk flow, low pressure applications

# Light lever pull-down will connect the plug and socket without fail ready to flow liquid or gases.

- This CUPLA complies with diversified applications in liquid or gas transportation.
- · End-face seal structure enables no bumps or hollows on the internal fluid passage, and ensures smooth fluid transportation.
- A special lip packing (except sizes 3/4" and 1", silicone rubber, and FEP-covered rubber) employed reduces the load to the lever for easy operation.
- · Connection part dimensions comply with US military specifications MIL-A-A-59326.
- . The variety of body materials, sizes and end configurations has been standardized to comply with wide range of applications.
- Additional stopper function design will enhance safety (only for made-to-order metal body product).

#### **Flow Direction**

#### nterchangeability

Sockets and plugs can be connected regardless of end configurations if the size is same. Can be connected with products whose mating part dimensions are in compliance with MIL-A-A-59326.

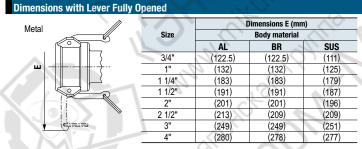

Suitability for Vacuum (M	letal Body)	53.0 kPa {400 mmHg}
Socket only	Plug only	When connected
	_	Operational

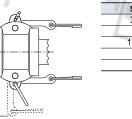

#### Suitability for Vacuum (Plastic Body)

Plastic

ш

Not suitable for vacuum application in either connected or disconnected condition.

Before use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the product

# **For Medium Pressure**

# **TSP CUPLA**

## For medium pressure general applications

# Valveless structure suits high viscosity fluids! Various body materials, sizes and end configurations. Braided hose connection types are newly added.

- Valveless construction drastically saves pressure loss and achieves high flow rate.
- Suitable for high viscosity fluids (such as grease).
- Available in various standard body materials, sizes and end configurations to cope with diversified applications and operating situations.
- No hose clamp required! Simple and secure connection to braided hose.
   Note: See the pages of Seal Material Selection Table at the end of this catalog for the suitability of seal materials to fluids.

SUS316 is available as option.

 Maximum working pressure and working temperature range of TSP CUPLA for braided hoses depend upon the specifications of braided hoses to be used.

• Seal material available for braided hoses is nitrile rubber only.

· Seal material available for steel body is nitrile rubber only.

Tighten the nut for braided hoses until it is flush against the hose barb base.

# Flow Direction

Fluid flow can be bi-directional when socket and plug are connected.

## Interchangeability

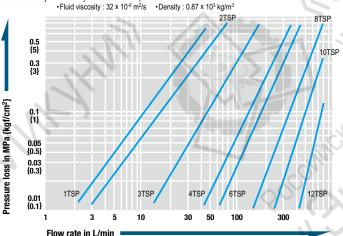

Sockets and plugs can be connected regardless of end configurations if the first number(s) of the model is the same.

*1 : TSP steel is a made-to-order item. *2 : Stainless steel: 54 x ø60 *3 : Stainless steel: 54 x ø59 *4 : Stainless steel: 58 x ø65 *5 : Braided hoses for TPN type and TSN type should be made of soft PVC and woven by reinforcement thread. • Hydrocarbon type grease is applied to the threaded part of stainless steel nut for TPN type and TSN type to prevent galling. Before use, please be sure to read 'Safety Guide' described at the end of this book and 'Instruction Sheet' that comes with the products Before use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the products **For Low Pressure** 

# One-piece design of TSP CUPLA socket and ball valve. Sleeve stopper mechanism prevent accidental disconnection during connection. (when the valve is open.)

• Socket valve can be opened and shut off while socket and plug are connected.

- Ball valve design provides for high flow rate.
- High viscosity fluids such as grease can be applied.

The handle of the ball valve locks the sleeve to prevent disconnection of the plug during use.

> Interchangeable with standard TSP CUPLA plug in the same size.

## **Suitability for Vacuum**

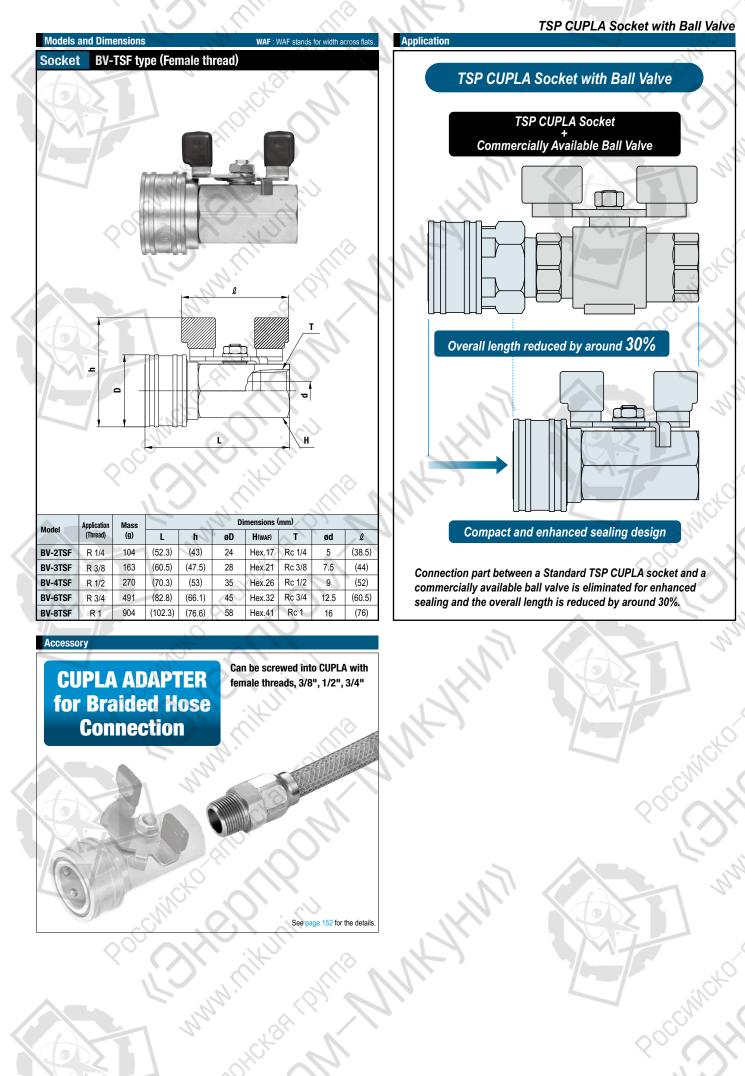

Not suitable for vacuum application in either connected or disconnected condition.

#### Flow Rate – Pressure Loss Characteristics [Test conditions] •Fluid : Hydraulic oil •Temperature : 30'C±5'C

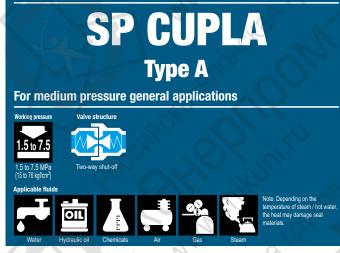

NITTO KOHKI CO., LTD. 80

For Medium Pressure

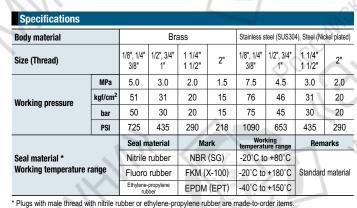

For medium pressure applications, with automatic shut-off valves in both socket and plug. Various body materials, sizes and end configurations. Plugs with male thread end are also available.

- Automatic shut-off valves in both socket and plug prevent fluid spill out on disconnection.
- Available in various standard body materials, sizes and end configurations to cope with diversified applications and operating situations.

# New self-aligned valve design provides better seal

The new design of the valve head makes smooth self-aligned return to its original position when socket and plug are disconnected. This mechanism enhances safety sealing of individual socket or plug when disconnected (1 to 8SP-A Type).

* Seal material available for steel body is nitrile and fluoro rubber.

#### Flow Rate Pressure Loss Characteristics

[Test conditions] · Fluid : Water Temperature: 25°C±5°C

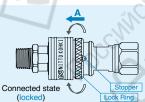

Flow rate in L/min

Socket

Lock Ring

# How to unlock

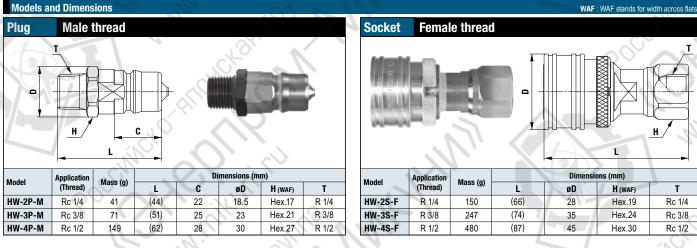

Slide the Lock Ring in the direction of the arrow A and rotate it simultaneously. When the Stopper is aligned with the deeper cutout on the Lock Ring, the CUPLA will be unlocked.

# Safety lock function (Sleeve lock)

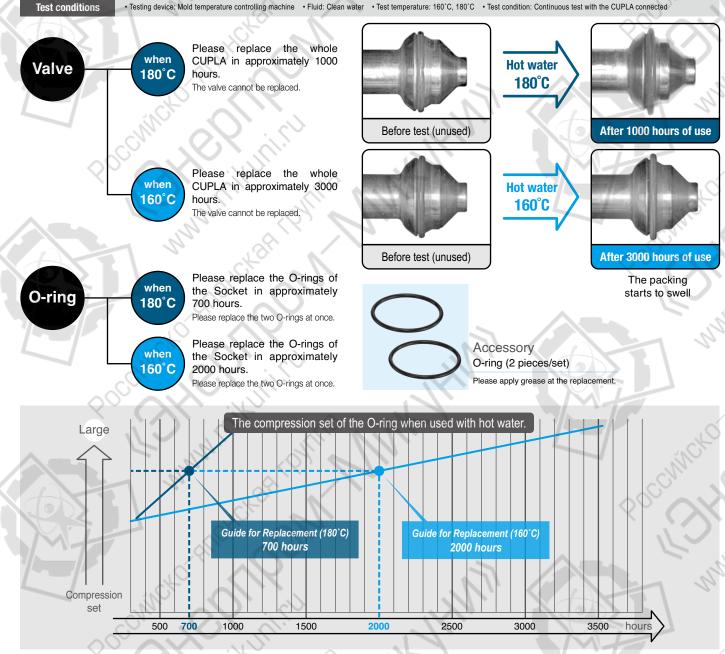

# HOT WATER CUPLA HW Type

# Approximate time for Valve / O-ring replacement

*Test results by us

# A Caution

*Hot water continuous flow test by a mold temperation controller Valve: For continuous use of 3000 hours at 160°C / 1000 hours at 180°C O-ring: For continuous use of 2000 hours at 160°C / 700 hours at 180°C

Although we have confirmed that there is no leakage, it is our experimental value and not a guaranteed value. Please consider above hours just as a guide. The durability of the seal differs depending on the customers usage conditions. (Number of connection / disconnection, fluid additives, etc.)

Air will be admixed at the time of connection. Please purge the air by the equipment side when using with hot water.
If additives are mixed in water or the piping is filled with steam, the lifetime of the seal will be decreased. When using in such an environment, conduct performance evaluation test by actual product.

Before use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the products

# **For Medium Pressure**

# **ZEROSPILL CUPLA**

# Unique seal design reduces both liquid spillage and air ingress.

- New valve design offers smooth zero-friction movement.
- Push to connect design.
- The variety of body materials, sizes and end configurations has been standardized to comply with wide range of applications.
- Automatic shut-off valves in both socket and plug prevent fluid spill out on disconnection.

# **HSP CUPLA**

For hydraulic pressure from 14.0 to 20.6 MPa {142 to 210 kgf/cm²}

# Special steel body is tough against vibration and impact! Male and female thread end configurations are available. Low pressure loss characteristic suits hydraulic equipment applications.

- Quenched special steel body!
- Powerful impact resistance, especially against impulses.
- Automatic shut-off valves in both socket and plug prevent fluid spill out on disconnection.
- In addition to conventional female thread type, male thread types (male tapered thread, male parallel thread with 30° flare, and male parallel thread with 30° cone-seat) are available. Male thread types are designed especially for direct connection to hydraulic power units effectively.
- Male parallel thread type complies with both metal seal and O-ring seal. (In case of O-ring seal, O-rings available in the market can be used.)
- Optional HSP-DC CUPLA series are available for die-casting machine applications with severe pressure variation.
- The overall length of male thread type is shorter than that of female thread type plus conversion nipple available in the market.
- PL type (Safety sleeve lock type) for 2HS to 8HS (except 66HS) with female thread is also available as standard.

#### Flow Rate – Pressure Loss Characteristics

[Test conditions] •Fluid : Hydraulic oil •Temperature : 30 °C±5 °C •Fluid viscosity : 32 x 10⁻⁶ m²/s •Density : 0.87 x 10³ kg/m³

Note: Either socket or plug of HYPER HSP CUPLA must be used on the line where the residual pressure remains. The counterpart of HYPER HSP must be either plug or socket of standard HSP CUPLA.

# **HYPER HSP CUPLA**

NITTO KOHKI CO., LTD. 90 CUPLA

For hydraulic pressure up to 20.6 MPa {210 kgf/cm²}

# Standard hydraulic CUPLA for general purposes with a working pressure up to 20.6 MPa. Low pressure loss, suitable for hydraulic equipment.

- General purpose hydraulic CUPLA with a working pressure of 20.6 MPa {210 kgf/cm²}.
- Structure is designed to reduce pressure loss to the lowest, and is best for hydraulic applications that need big flow rates.
- Both socket and plug have built-in automatic shut-off valves that prevent fluid outflow when disconnected.

# **Application Example**

н

# **HSU CUPLA**

Stainless steel CUPLA for high pressure up to 21.0 MPa {214 kgf/cm²}

# The flow volume is increased by between 14 to 44% while at the same time the coupled length is reduced by at least 10% compared with the S210 CUPLA.

- Body material is excellent corrosion resistant stainless steel (SUS304). Suitable for use in tough / harsh environments such as offshore applications.
- Sleeve stopper mechanism can be engaged by rotating sleeve after connection.
- Despite having a stainless steel body, the working pressure, 21.0 MPa, of HSU CUPLA is comparable to that of special steel body CUPLA such as HSP CUPLA series.
- Both socket and plug have built-in automatic shut-off valves that prevent fluid outflow on disconnection.
- Hydrogenated nitrile rubber (HNBR) is used as a seal material for wide variety of liquids.

# S210 CUPLA

Stainless steel CUPLA for high pressure up to 20.6 MPa {210 kgf/cm²}

# Stainless steel for excellent corrosion resistance!

# The unique "inner seal mechanism" accepts a working pressure up to 20.6 MPa.

- Body material is excellent corrosion resistant stainless steel (SUS304). Suited for use in tough conditions such as ocean development.
- Although it is made of stainless steel, the unique "inner seal mechanism" enables the working pressure of 20.6 MPa {210 kgf/cm²}, the same as special steel's.
- Safety lock (accidental disconnection prevention mechanism) ensures tight and secured connection under vibration or impacts.
- Both socket and plug have built-in automatic shut-off valves that prevent fluid outflow on disconnection.

# **280 CUPLA**

For hydraulic pressure up to 27.5 to 31.5 MPa {281 to 321 kgf/cm²}

# Generic CUPLA copes with high pressure lines in hydraulic equipment! Low pressure loss is ideal for hydraulic equipment.

- Conforms to international standard ISO 7241-1A.
- General purpose hydraulic CUPLA with the working pressure up to 27.5 to 31.5 MPa {281 to 321 kgf/cm²}.
- Structure keeps pressure loss extremely low, particularly ideal for hydraulic applications requiring high flow rates.
- Both socket and plug have built-in automatic shut-off valves to prevent fluid spill out when disconnected.
- Special steel body material is adopted for its excellent strength and additional quenching treatment is done to withstand hydro pressure impacts.

# FLAT FACE CUPLA F35

For hydraulic pressures up to 35.0 MPa {357 kgf/cm²} with flat contact face

# Flat contact face design reduces spill upon disconnection.

- Flat contact face design makes it easy to clean dust and foreign matter adhered on the surface of coupling so as to prevent them from entering inside and thus causing faulty operation of connection or disconnection.
- Flat contact face design minimizes air admixture during connection to keep the possible malfunction of equipment caused by the air bubbles in the hydraulic line at minimum level.
- Push-to-connect operation.
- Sleeve stopper mechanism is engaged by rotating sleeve after connection. It prevents accidental disconnection even when vibration or impact is applied to the CUPLA.
- The special design reduces pressure loss considerably, and especially suited to hydraulic applications in which big flow is needed. Both socket and plug have built-in automatic shut-off valves that prevent fluid spill out on disconnection.

OCCIMICKO ATT

# FLAT FACE CUPLA FF

For hydraulic pressure up to 35.0 MPa {357  $kgf/cm^2$ } with flat contact face

# Compared with Nitto Kohki's conventional 35 MPa CUPLA, the flow volume is increased 1.5 to 2 times.

*Increase ratio of each flow volume depends on the CUPLA size.

- "Airless valve shut-off" design minimizes spillage volume on disconnection and admixture volume of air on connection.
- Best suited for hydraulic lines with drastic high pressure pulsation such as in die-casting machines.
- Sleeve stopper design preventing accidental disconnection under vibration or impacts enhances workability and safety.
- Sizes are Rc 3/8, Rc 1/2, Rc 3/4, and Rc 1. *Only the same size of socket and plug can be connected.

Maximum Tighteni		Vm {kgf∙cm}		
Size (Thread)	3/8"	1/2"	3/4"	1"
Torque	40 {408}	80 {816}	150 {1530}	250 {2550}

## **Flow Direction**

Fluid flow can be bi-directional when socket and plug are connected

## Interchangeability

Socket and plug of different sizes cannot be connected.

Minimum Cross-Sectional Area (n								
Model	FF-3S × FF-3P	FF-4S × FF-4P	FF-6S × FF-6P	FF-8S × FF-8P				
Minimum cross-sectional area	51	106	215	332				

#### Suitability for Vacuum

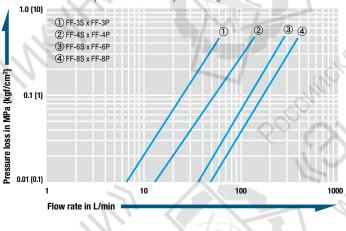

Not suitable for vacuum application in either connected or disconnected condition.

Admixture of Air on Connection May vary depending upon the usage conditions.						
Model	FF-3S x FF-3P	FF-4S x FF-4P	FF-6S x FF-6P	FF-8S x FF-8P		
Volume of air admixture	0.018	0.029	0.033	0.080		

Volume of Spillage per Disconnection May vary depending upon the usage conditions.								
Model	FF-3S × FF-3P	FF-4S × FF-4P	FF-6S × FF-6P	FF-8S × FF-8P				
Volume of spillage	0.009	0.023	0.031	0.110				

## Flow Rate – Pressure Loss Characteristics

[Test conditions] 
 •Fluid : Hydraulic oil •Temperature : 30 C±5 C •Fluid viscosity : 32 x 10⁻⁶ m²/s •Density : 0.87 x 10³ kg/m³

Offset concave flat face enables quick and smooth connection

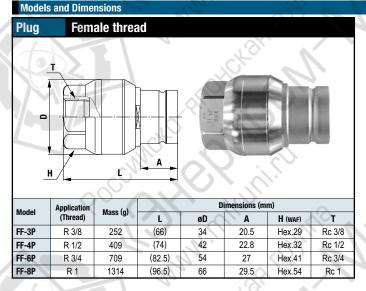

Unique flat face design Concaved offset for the flat face on socket guides plug for quick and smooth centering and connection, but still easy to wipe off dirt and dusts.

Hexagon nut for easy mount

#### 🗥 Precautions for use

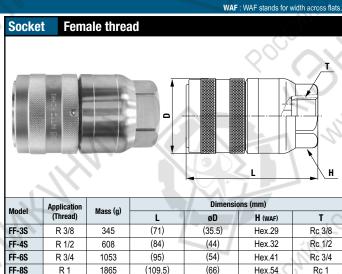

Do not connect / disconnect CUPLA when pressure is applied or remaining.

# FLAT FACE CUPLA FF

MNNN.E

VA-ANDHOKAA PHILA

#### Applications

- Hydraulic piping for die-casting machines
- Casting machines
- Electric furnaces
- Molding presses
- Forging press
- Powdery alloy presses
- Extrusion molding machines
- Machine tools
- Iron manufacturing blast furnaces
- Continuous casting machines
- Rolling mills
- Pipe forging machines
- Furnace opening / closing machines
- Glass molding machines, etc.

Built-in automatic shut-off valve Sleeve stopper design

Unique flat face design

#### MULTI CUPLA MAM Type

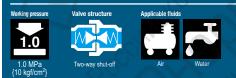

For Multi-Port Connection (Manual)

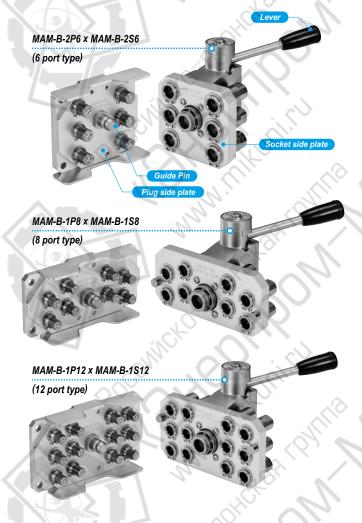

# MAM-B Type

#### **Multiple port system**

# Simultaneously connects several ports securely in one operation. Greatly reduces changeover time in multiple ports replacement.

- Handles several ports at once.
- Simple manual lever action completes easy connection / disconnection.
- Two-stage lever operation prevents CUPLA from accidental dropping due to sudden detachment.
- Comes with lock mechanism to prevent accidental disconnection.
- Large flow equivalent to that of SP CUPLA Type A.
- Two kinds of plates are available for each size.
- Automatic shut-off valves in both socket and plug prevent fluid spill out on disconnection.
- Self-aligned valve design provides safety sealing of individual socket or plug when disconnected.

115 NITTO KOHKI CO., LTD. CUPLA COMPLET

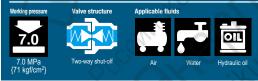

Made-to-order MULTI CUPLA are available on request, such as a combination of different sizes on the flange plate.

### **For Multi-Port Connection (Automatic)**

# MAS Type / MAT Type

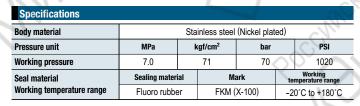

#### 7.0 MPa {71 kgf/cm²} general purpose type

# Connects multiple lines simultaneously with a single operation for different fluids and sizes.

- Ideal for automated hydraulic or pneumatic cylinder operated systems that need to connect and disconnect several lines simultaneously.
- Automatic shut-off valves in both sockets and plugs ensure no outflow of fluid on disconnection.
- Body materials other than stainless steel are available, which can be ordered with or without valves (made-to-order products).
- Snap ring and screw thread-in types to mount on the base plate are standardized.
- MAS type can accept axial eccentricity between socket and plug. The allowance of eccentricity is within the radius range of 0.3 mm.
- * CUPLA connection or disconnection with fluid under dynamic pressure cannot be made.

MAS (Snap ring) type

### For Multi-Port Connection (Automatic)

# **MULTI CUPLA**

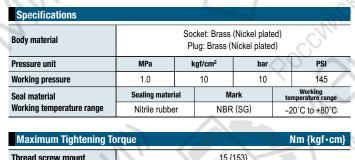

# MALC-01 Type for Low Pressure Use

#### One-way shut-off type for Low pressure use

# Solo use of socket is possible. Suitable for operation of ejector pins to open / close valve gates in molding.

- Solo use of socket is possible.
- As in the case of MULTI CUPLA MALC-SP type and MALC-HSP type, the distance between the socket plate and the plug plate is designed to be 30 mm when connected. This means the MULTI CUPLA MALC-01 type can also be installed mixed with any size of MALC-SP type and MALC-HSP type on the same plate.
- An axial eccentricity allowance of 2 mm eliminates precise centering at installation.
- Compact size with " thread screw mount " and "with flange" types available.

# Maximum Tightening Torque Nm {kgt+cm} Thread screw mount 15 {153} Flange 1.5 {15}

#### Interchangeability

Sockets and plugs can be connected regardless of end configurations.
Not interchangeable with MALC-SP Type (for medium pressure use) MALC-1SP or MALC-HSP Type (for high pressure use) MALC-1HSP.

Minimum Cross-Sectional Area		(mm²)
Minimum cross-sectional area	28	G .

#### Suitability for Vacuum

Not suitable for vacuum application in either connected or disconnected condition.

Load Required to Maintain Connection When Line Is Pressurized

#### $F = (P \times 160) + 50 \{ f = p \times 1.6 + 5 \}$

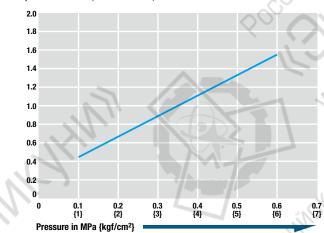

Minimum load required to maintain connection F [N] {f [kgf]} Actual value of pressure P [MPa] {p [kgf/cm²]}

Assign the actual value of pressure [P (MPa), p (kgf /cm²)] to the above formula. Maintain the connection with this load [F (N), f (kgf)] or more. However, the maximum acceptable load is 500 N {51 kgf}.

#### Pressure - Flow Characteristics

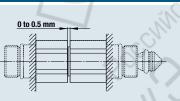

rate in m³/min

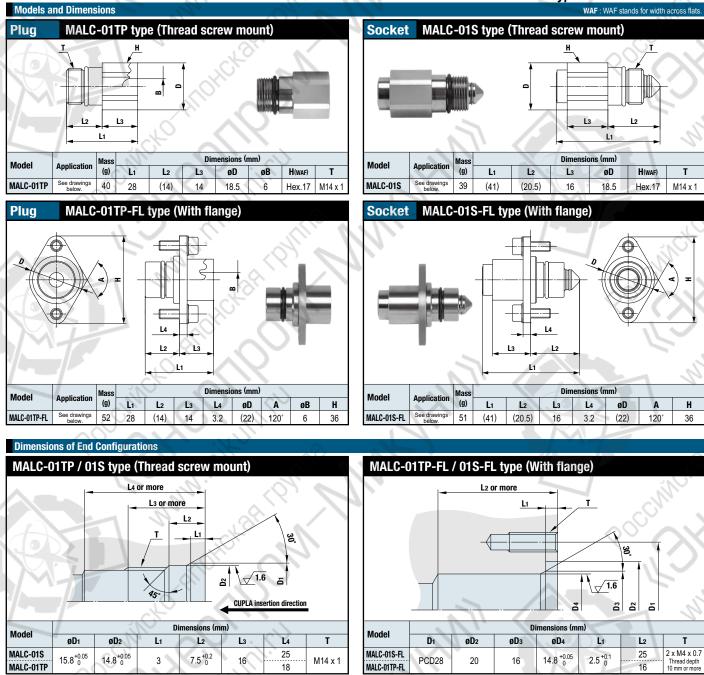

#### Acceptable distance between plates

Socket and plug or plate must be used in contact with each other. Maximum 0.5 mm distance between socket and plug or plate is acceptable.

#### MULTI CUPLA MALC-01 Type for Low Pressure Use

#### Solo use of socket is possible

## For Multi-Port Connection (Automatic)

# **MULTI CUPLA**

## MALC-SP Type for Medium Pressure Use

#### Low spill type for medium pressure use

## A single operation enables simultaneous connections of multiple lines. A special design for medium pressure use minimizes air admixture in fluid lines upon connection.

- Compared with conventional MULTI CUPLA, approximately double flow rates are realized. This could reduce the size of required plates. (Rate of flow increase depends on CUPLA sizes.)
- The MALC type realizes a 2 mm axial eccentricity allowance, while the conventional MULTI CUPLA is only 0.6 mm.
- Special valve design enables connection of socket and plug under pressure of up to 2 MPa. (up to 1.5 MPa for MALC-12SP.)
- When connected, the distance between the socket plate and the plug plate is designed to be 30 mm for all sizes. This means that any size of CUPLA can be mounted and used on the same plate.
- Low spill valves minimize outflow of fluid and admixture of air into the fluid line.

#### **Dimensions of End Configurations**

# **SEMICON CUPLA** SP Type For semiconductor manufacturing production installation 0.

# General purpose type with stainless steel body and rubber seal. **Electro-polished body for enhanced** corrosion resistance.

- Body and valve springs are stainless steel (SUS304). Body is electro-polished for enhanced corrosion resistance.
- Seal materials can be selected to suit your fluid and application, to flexibly comply with your semiconductor production process requirements.
- All components are cleaned, assembled, inspected, and then packed in a clean room.
- · Grease free. No grease is applied to the seal material.
- Each plug comes with a dust cap.
- · Stainless steel SUS316 body and valve springs are available as made-to-order products.

The appearance of SUS304 and 316 bodies is different

# Adopted stainless steel body and fluorine contained resin valves.

- The body and spring material of stainless steel (SUS304), and valve of fluorine contained resin ensure excellent performance with various chemicals.
- Body (SUS304) is electropolished for enhanced corrosion resistance.
- All components are cleaned, assembled, inspected, and then packed in a clean room.
- Grease free. Grease is not applied to the seal material.
- Plug comes with a dust cap.

# Polytetrafluoroethylene (PTFE) is utilised for the body.

- Polytetrafluoroethylene (PTFE) body gives excellent resistance to chemicals.
- Both socket and plug have built-in automatic shut-off valves that prevent fluid from outflowing when disconnected.
- No dissolution of metal ions from part in contact with liquid ensures excellent reliability.
- All components are cleaned, assembled, inspected and then packed in a clean room.
- Appropriate model can be selected form a wide variety of sizes to suit your application / fluid.
- Optional keyway lock to prevent incorrect connection. 10 keyway patterns are available.

Specifications **Body material** Polytetrafluoroethylene (PTFE) 1/4", 3/8", 1/2", 3/4", 1" Size (Thread) 1/4-18NPT, 3/8-18NPT, 1/2-14NPT, 3/4-14NPT, 1-11.5NPT Pressure unit MP: kgf/cm ha PSI Working pressure 02 29 Norking Seal material Mark Remarks Socket Seal material FEP-cove fluoro rub 0-rina +5°C to +50°C Standard materia Working temperature range Fluoropolymer resin (PFA) Valve

#### Maximum Tightening amount (approximate)

With seal tape wrapped on the male thread, screw it firmly by hand, and then add more tightening with a wrench as shown below.

$1\frac{3}{4}$ to 2 turns	1/4" · 3/8" · 1/2" · 3/4" · 1" Size

Whichever method, overtightening may damage the thread and cause leakage, so take extra care.

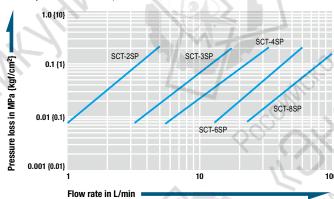

#### Interchangeability

Sockets and plugs can be connected regardless of end configurations if the number  $\Box$  in the model name {SCT- $\Box$ S (P)} is the same.

* Available end configurations are female ISO Rc thread and female NPT thread.

Plug or socket with female ISO Rc end configuration has V-groove on the body as identification. (In case of female NPT thread, no V-groove on either plug or socket body)

Please inquire for other end configurations other than female thread (e.g. flanged or male thread).

# SEMICON CUPLA **SCAL Type**

#### For semiconductor manufacturing equipment

# Body is polytetrafluoroethylene (PTFE).

• Polytetrafluoroethylene (PTFE) body gives excellent resistance to chemicals.

- Unique seal design ensures minimal liquid spill. · Both socket and plug have built-in automatic shut-off valves that prevent fluid
- from outflowing when disconnected. · No dissolution of metal ions from part in contact with liquid ensures excellent
- reliability. · Push-to-connect design.
- Flanged socket body makes it easy to push down sleeve even when wearing gloves.
- · All components are cleaned, assembled, inspected and then packed in a clean room.
- · Concaved surface of the plug end prevents liquid loss and protects the plug seal surface from damage if dropped or hit.
- To prevent incorrect connection, a keyed type sleeve is available on a made-to-order basis.
- Ten key angle positions are available. The appearance of the keyed type body slightly differs from that of the standard type.

*Made-to-order item

• Plug comes with a cap made of high density polyethylene (HDPE). • Outer appearance of NPT thread type differs slightly from that of the above

Please contact us about end configurations other than female thread such as flange and male thread. · Excessive tightening will damage the threaded part and result in leakage.

Note: A very small amount of gas can permeate polytetrafluoroethylene (PTFE) bellows in the socket.

# All plastic model. Fluoropolymer resin (PFA) body.

- All parts made of fluoropolymer resin. O-rings in particular are FEP-covered fluororubber with excellent chemical resistance and no rubber elution.
- To connect with a plug, just push the socket on to it. Disconnection is done in simple and one-handed button operation.
- Unique "double lock mechanism" prevents accidental disconnection of socket and plug.
- Branched tube port improves operability and reduces required piping space.
- Plugs come with a dust cap.

#### For Inert Gas and Vacuum

# SP-V CUPLA For vacuum

# Automatic shut-off valves in both socket and plug for vacuum applications. Each can withstand a vacuum of as high as 1.3 x 10⁻¹ Pa even when disconnected.

- Uses automatic shut-off valves with ultra-tight sealed construction in both socket and plug. Ideal for vacuum applications.
- Having automatic shut-off valves in both socket and plug facilitates easy fluid handling. Suitable for a wide range of vacuum applications as high as 1.3 x 10⁻¹ Pa {1 x 10⁻³ mmHg} even when disconnected.
- Three types of seal material are available to suit any of the diversified production lines for air conditioners, refrigerators or similar.
- Can be connected with SP CUPLA Type A.

Can be connected with SP CUPLA Type A

Adopted fluoro-rubber (FKM), hydrogenated nitrile rubber (HNBR) and chloroprene rubber (CR) as the standard seal materials to suit

as the standard sear materials to suit air conditioner and refrigerator production lines Standard body materials are brass and stainless steel

(Note: Models 4SP-V and 6SP-V of stainless steel body are made-to order items)

The above photos are for 3SP-V

#### unique straight guide is incorporated to stabilize valve movemen

Both socket and plug have unique vacuum resistant automatic shut-off valves inside. The valve has excellent vacuum resistance even after disconnection.

#### **Comparison of External Appearance**

Socket

When two different gases are used simultaneously in the production lines, SP-V-GN type and SP-V-GNN type (non-interchangeable with standard SP-V and each others) may be required in order to prevent connections to improper lines by mistakes. They are made-to-order items. For details please contact Nitto Kohki direct or its distributor in your country.

**Application Example** 

#### For Inert Gas and Vacuum

# **PCV PIPE CUPLA**

#### For connection to copper pipes

# Clamps directly on straight copper pipes ! Double seal construction withstands a vacuum of up to 1.3 x 10⁻¹ Pa.

- Clamps directly on to straight copper pipes eliminating unnecessary welding or flaring.
- Withstands a vacuum of up to 1.3 x 10⁻¹ Pa (when connected) making it possible to be used in leak testing, vacuum suction and refrigerant charge.
- Select from three standard types of seal materials to be used with fluids for air conditioner and refrigerator production lines. Many models to suit various pipe sizes.
- One lever operation simultaneously clamps and seals pipe. Double seal construction for tight fit on end and outside surface of pipe ensures excellent sealing and vacuum resistance.

#### **Clamping Mechanism**

#### **For Paint**

# PAINT CUPLA

#### Piping for painting equipment

# Quick connection and disconnection of paint spray gun and paint fluid line is realized.

- Unique swing connection system enables easy connection and disconnection of paint spray gun and paint hose even by gloved hands.
- Full-open gate valve mechanism prevents paint precipitate buildup.
- Adoption of special resin seal that has resistance against solvents made it
  possible to feature superior durability, long stable capability, and easy
  cleaning of paint spray gun after the job.
- Connection and disconnection can be made even if paint sticks to the socket sleeve.
- Small and lightweight design (80 g per set) reduces the weight to be held by hand of operators.
- Built-in sleeve lock mechanism prevents accidental disconnection of CUPLA, ensuring safe operation.
- Wide variety of end configurations (standard thread: G 3/8) are available in response to

various paint spray guns.

**Flow Direction** 

Fluid must run from socket to plug.

# Solves the troubles of ferrule joints by the effortless operation unique to CUPLA. Easy disassembly and cleanability help in hygienic management of HACCP.

- It can be connected by just inserting the plug to the socket and twisting the "Safety lock".
- The "Safety lock" feature ensures that there can be no unintentional disconnection of the coupling.
- O-rings that conforms to the Food sanitation Act of Japan is adopted.
- An operator friendly design. Seal parts will not drop off during connection like conventional fittings.
- Stainless steel (JIS SUS316L equivalent) for the liquid contact parts, and finished with buffing (#400).

#### Smart Connect and Disconnect

#### Applications

#### Easy assembly and disassembly

No tools are required to disassemble / assemble HYGIENIC CUPLA. Small number of parts that are easy to handle, aiding efficient maintenance.

#### **Construction and Safety standards**

Since the O-Ring is attached beforehand, it will not drop off during connection like conventional fittings. And the seal material conforms to article No. 3-D-3-(1) Rubber utensils (except nursing utensils) or Containers / Packages. It has passed both material and elution tests specified in the Food sanitation Act and the standards for Food and Food additives (Notice No.370 of 1959 issued by the Ministry of Health and Welfare of Japan). Also conforms to standard No. 21 CFR 177.2600 of the US Food and Drug Administration (FDA).

SEW-2.0S-FR

#### Easy washing of the whole unit

After disassembly, small number of components requires minimum effort when cleaning. No small parts to lose.

#### Accessory

64

#### Safety Lock function

As a safety measure, the "Safety lock" feature ensures that there can be no unintentional disconnection of the CUPLA. By turning the cam handle, you can maintain the connected state of the socket and plug.

#### Consumables

The O-ring and Lock plate ASSY are consumable items. See the following list as a replacement guide for the Lock plate ASSY. Replacement guide Replacement parts Connection and disconnection times Lock plate ASSY 1000 times Lock plate ASSY - When the Lock plate ASSY is deformed, replace it with a new one regardless of connection / disconnection times. - The durability of the O-ring differs depending on the operating environment and conditions (pressure and temperature etc.).

# Semi-Standard CUPLA Series

# **CUPLA with Single Lock CUPLA with Safety Lock**

Accidental disconnection prevention mechanism

The standard CUPLA series listed on the lower right can have an additional single lock or a safety lock mechanism to prevent accidental disconnection.

#### CUPLA with Single Lock

The sleeve is provided with a cutout and the body of the socket has a projecting lock pin or ball. After connecting the CUPLA, simply turn the sleeve to lock the back and forth movement of the sleeve.

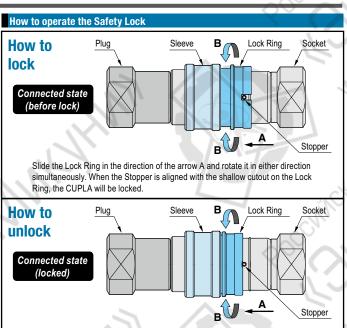

CUPLA with Safety Lock

A sleeve stopper Lock Ring is provided behind the sleeve. After connecting the CUPLA, simply turning the Lock Ring to disable the back and forth movement of the sleeve (see diagram sketch on the right top).

Slide the Lock Ring in the direction of the arrow A and rotate it in either direction simultaneously. When the Stopper is aligned with the deeper cutout on the Lock Ring, the CUPLA will be unlocked.

#### CUPLA with Single Lock

HI CUPLA (Brass) / MOLD CUPLA / SP CUPLA Type A / TSP CUPLA / HSP CUPLA / 210 CUPLA *The above all with single lock are made-to-order.

The following CUPLA come with single lock as standard feature.

HI CUPLA BL / LOCK CUPLA 200 / HSU CUPLA / 350 CUPLA / FLAT FACE CUPLA F35 / FLAT FACE CUPLA FF / 450B CUPLA

#### CUPLA with Safety Lock

SP CUPLA Type A / TSP CUPLA / HSP CUPLA / 210 CUPLA / 350 CUPLA *The above all with safety lock are made-to-order.

The following CUPLA come with safety lock as standard feature. HOT WATER CUPLA / S210 CUPLA

# **Two-way Shut-off Type Small Size CUPLA**

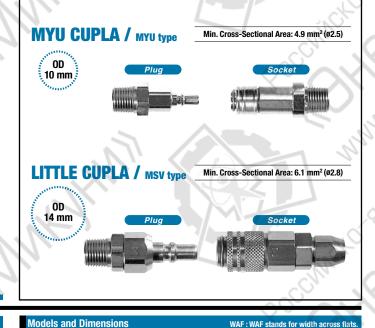

For temperature controllers

- · Push-to-connect operation.
- · Both socket and plug have built-in automatic shut-off valves to prevent fluid spill out when disconnected.
- Easy connection even in a restricted area.
- Lightweight feature will allow you easy design of multiple piping.

# CUPLA NITTO KOHKI CO., LTD. 146

# SP CUPLA Type A PV Type

For Medium Pressure / Connectable with residual pressure With Purge Valve

# Equipped with residual pressure eliminating valve (up to 1 MPa).

- Automatic shut-off valves in both socket and plug prevent fluid spill out on disconnection.
- Smooth connection even when there is residual pressure when connecting.
- No residual pressure eliminating operation required on your piping. Just connect to purge the remaining pressure.

Admixture of All off Conficction may vary depending upon the usage conductors. (IIIL)

Before use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the products.

Safety Guide: This product can be connected under residual pressure, but do not connect under dynamic pressure applied. It may lead to incomplete connection, deteriorated durability or possible valve fly out. Read without fail and observe the "Instruction sheet" that comes with the product and the following pages in the general Outick Connect Coupling Catalog; [Precautions Relating to the Use of All CUPLA] and "CUPLA for Low Pressure (Water, Liquid) and for Medium Pressure" in the [Safety Guide] page.

Accessories for CUPLA

Quick Connect Couplings

For plugs

# **DIP MOLD DUST CAP**

Dust caps for HI CUPLA, SP CUPLA Type A, TSP CUPLA, and HYDRAULIC CUPLA

• PVC Dust Caps produced by dip molding are available for HI CUPLA, SP CUPLA Type A, TSP CUPLA, and HYDRAULIC CUPLA. Dust Caps prevent dust from getting inside the fluid line and protects the sealability and life of the O-ring.

For sockets

Caution: The function of the cap may be damaged due to fluid adhering to the CUPLA or due to the external environment. Wipe off the fluid from the CUPLA to prevent the fluid from adhering. SAFETY CAP

Metal caps for HI CUPLA Series, SP CUPLA Type A, TSP CUPLA and HYDRAULIC CUPLA (Semi-standard)

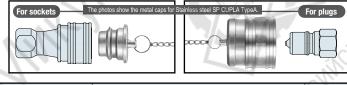

- part A.
- Metal Cap equipped with dust-proof and leak prevention function.

Size-adjustable Ring for Dip Mold Cap

nart A.

The ring size can be adjusted by moving the part A.

Caps with metal material corresponding to that of CUPLA body are available.

# Model Model Applicable CUPLA Sales unit Model name of Safety Cap is stated in the following manner. Example: "2S-A-SD" identifies a safety cap for SP CUPLA Type A Model 2S-A. Sockets and plugs for HI CUPLA, SP CUPLA Type A, TSP CUPLA, HSP CUPLA, 210 CUP

When ordering, please indicate Model Name or part number. Semi standard items: As these items are not always in stock, delivery time is subject to confirmation

# ACCESSORIES FOR O-RING MAINTENANCE

Jigs & grease for replacement of O-rings for couplings For SP CUPLA Type A, TSP CUPLA, HOT WATER CUPLA, ZEROSPILL CUPLA, HSP CUPLA, HSU CUPLA and HYGIENIC CUPLA

• The seal materials play an important role in maintaining the performance of a coupling. O-rings or seal materials of these CUPLA series are designed to be replaceable. Please be certain to choose the

correct and genuine Nitto kohki O-ring in order to maintain the performance of couplings.

For sockets

Attachable CUPLA

Sockets and plugs for SP CUPLA Type A, HSP CUPLA,

210 CUPLA, S210 CUPLA, 280 CUPLA and 350 CUPLA

# **RESIDUAL PRESSURE RELEASE JIG**

Residual Pressure Release Metal Jig for SP CUPLA Type A and HYDRAULIC CUPLA (Semi-standard)

- · Residual pressure within socket or plug can be released easily by just turning the handle.
- Residual pressure release jigs are available in two types; socket type for use with plugs and plug type for use with sockets.
- · Connection to sockets or plugs is the same as connection of normal CUPLA. Mode

The model name is to be defined in the following manner.

# Z N – Type of CUPLA to be attached

Residual pressure release jig

Caution: Since the upper limit of residual pressure that can be relieved depends on the product, please contact us separately

# **CUPLA ADAPTER** for Braided Hose Connection Mounts on CUPLA plug / socket with female thread

- Adapter for CUPLA with female thread such as ZEROSPILL CUPLA and SP CUPLA Type A.
- No hose clamp is required resulting in reduced risk of injuries to fingers or palms.
- Deterioration of the braided hose at the hose barb part has been eliminated.
- · Unique nut construction increases the pulling load of braided hoses.
- · Simply push a braided hose onto the hose barb to the end and tighten the nut until it is flush against the hose barb base.
- No inner parts for conventional braided hose fittings are required. Thus incorrect assembling does not occur.

A tool and a hose clamp are not required.

Not Required

## Please use braided hoses available in the market.

Specifications			$\sim$	
Body material		Bra	ass	
Model	BH90-3M	BH120-4M	BH150-4M	BH190-6M
Size (Thread)	3/8"	1/2"	1/2"	3/4"
Braided hose size	ø9 x ø15 mm	ø12 x ø18 mm	ø15 x ø22 mm	ø19 x ø26 mm
Working pressure *1	Depends u	upon the specification	ns of braided hoses t	to be used.
Working temperature range *1	Depends u	upon the specification	ns of braided hoses	to be used.
Applicable fluids *2		Air, Wa	ater, Oil	.0
		<u> </u>		

Maximum Tightening To	~	Vm {kgf∙cm}		
Model	BH90-3M	BH120-4M	BH150-4M	BH190-6M
Torque (Taper Pipe Threads) *3,4	12 {122}	30 {306}	30 {306}	50 {510}

*1 : Max working pressure and working temperature depend upon the specifications of braided hoses to be used

*3 Use within the specification of the seal material and the braided hose to be used.
*3 Stress corrosion crack may happen if they are used under corrosive environment. Take note of usage conditional stress are used.
*4 Tighten the nut until it is flush against the hose barb base after pushing a braided hose to the end.

· Braided hoses should be made of soft PVC and woven by reinforcement thread

# Application Example

For plugs

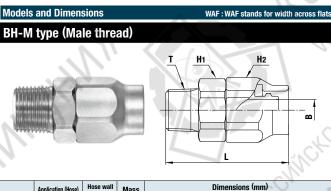

**Example: For the CUPLA** 

model 350-3S,

the jig name would be ZN-350-3S

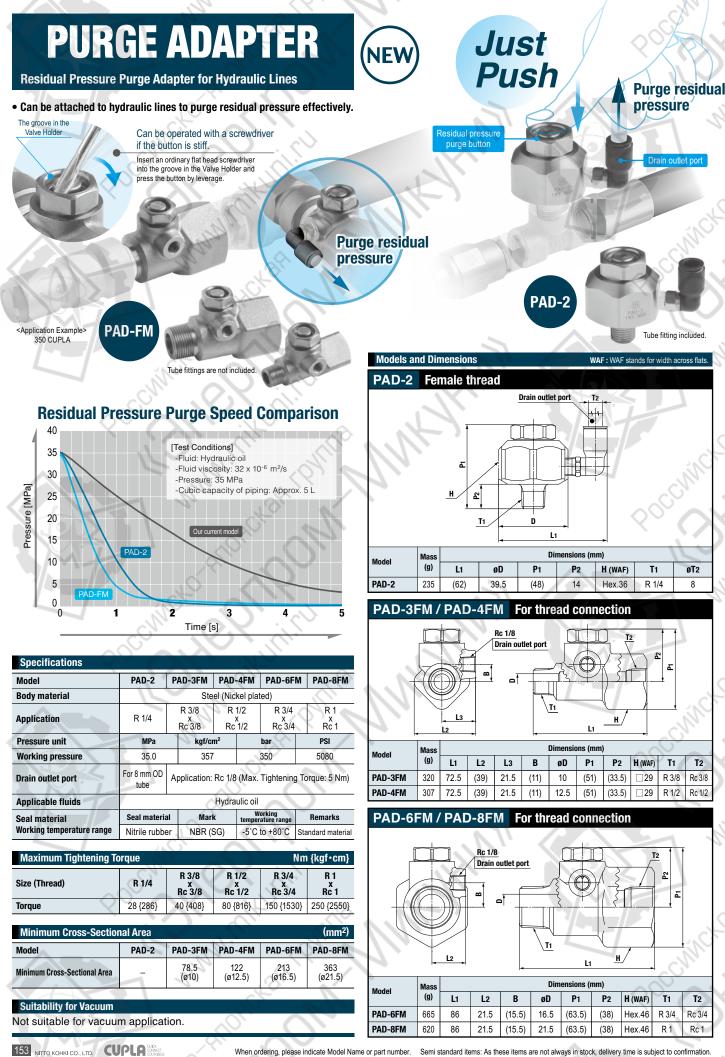

Can be mounted on the plug and socket of ZEROSPILL CUPLA.

# **Benefits without a hose clamp**

	Application (Hose)	Hose wall	Mass		Dir	nensions (m	m)	
Model	(mm)	thickness (mm)	(g)	L	H1 (WAF)	H2 (WAF)	ST .	øB

When ordering, please indicate Model Name or part number. Semi standard items: As these items are not always in stock, delivery time is subject to confirmation

# **CUPLA CONNECTING JIG**

**Connecting Jig for large CUPLA** 

· Smooth and easy connection of large CUPLA by operating a lever.

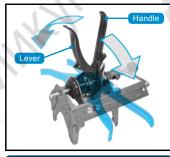

The photo shows SP CUPLA Type A / 16SP-A (Rc2)

# Versatile

Corresponds to all applicable models¹ by adjusting the body length.

*1: Standard CUPLA appearing in the CUPLA general catalog (two-way shut-off valve). Except MULTI CUPLA series. See below list of applicable models.

### Functional

The Handle can be used at any angle to prevent interference with the CUPLA.

List of Applicable Models

#### Safe

If excessive force occurs during connection, the safety device prevents damage to the body. When the safety device is activated, the connection of the CUPLA is disabled.

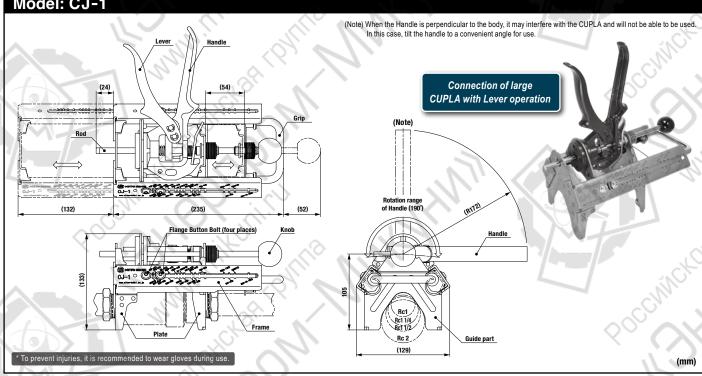

Applicable models		Size (1	Thread)

Specifications	
Model	CJ-1 (?)
Body material	Stainless steel (SUS430), Aluminum alloy
Applicable CUPLA	See list on the right
Connection under residue pressure	Not possible
Working temperature	Normal temperature
Storage Temperature Range	-20°C to +60°C
Mass	1.85 kg
Accessories	4 mm Hexagon wrench, Operation procedure tag, Cable tie

Prior to use, confirm the CUPLA to be connected and adjust it according to the model and size. (See instructions for the adjusting procedures provided with the product)

## Models and Dimensions

# Model: CJ-1

# Seal Material Selection Table for Reference

For seal parts in the CUPLA (the important parts that prevent leaking to the outside), it is important to select the most appropriate seal material to suit the property and temperature of the fluid. It is so important that wrong selection may not only completely malfunction the CUPLA but also cause an unexpected accident.

When the fluid in question is not listed in "Seal Material Selection Table (For reference)," the seal material that you select should be tested under actual environment. Even if the fluid is stated in the following list, the test could be required in some cases

# Seal Material Selection Table for Reference

Note: Contact us when the space is blank.

O Practically no harm, and can be used (Excellent) 
 the selection
 Some harm may be inevitable but can be used under restrictions (Good)

 tables
 Should be avoided if at all possible (Not recommended)

 × Should not be used (Unsuitable)

Note: When selecting the seal material, please consider the following suggestions carefully: 1. If there is no comment in the column of the fluid name, the condition of the fluid is under saturation at room temperature. Please check with us for applications at a high fluid temperature or with different fluid concentrations.
 For applications related to foods, please order separately specifing the detailed applications.

# **Body Material Selection Table**

The selection of appropriate body material for the CUPLA is closely related to its usage application, the type of fluid run through, its concentration (%), the pressure, its working environment, etc. So the material must be carefully considered in order to use the CUPLA efficiently and obtain its full performance. Since there are some body materials that should not be used with certain fluids, please refer to this table when making your selection.

# **CUPLA Inquiry Form**

If you are unable to find a CUPLA that you are looking for, or the type that suits your particular requirements in this catalog, please fill in this form and fax it to our distributor in your country or directly to us. We will select the most suitable CUPLA for your applications and contact you directly or through our distributor.

# Taper Pipe Threads

# UDC 621.882.082.2 JIS Japanese Industrial Standard

This Japanese Industrial Standard specifies taper pipe threads and is applicable to the threads used mainly for pressure-tight joints on the threads for joining pipes, pipe fittings, fluid machinery, etc.

Attached Table: Basic Profiles, Basic Dimensions and Tolerance

Unit: mm

			Thr	read			Gauge dia		Positio	on of gauge	e plane		Leng	th of usef	ul thread (	min.)	1	1

# Production Facilities That Assure Our Product Quality

Large scale production facilities in Tochigi Prefecture, Japan and Ayutthaya, Thailand, having the capability of flexible mass production, are in full operation around the clock and constitute a complete high-grade supply system, from the machining of components to the assembly and testing of finished products, that is forever ready and able to respond to our user's reliance.

Production Facilities Assure Flexible Supply System

# TOCHIGI NITTO KOHKI CO., LTD.

Production of CUPLA, Linear-Motor-Driven Piston Pumps and their Applied Products

Tochigi Nitto Kohki factory is accredited under ISO 14001 & 9001.

In November 1995, the Japan Quality Assurance Foundation, authority for inspection and registration, awarded Tochigi Nitto Kohki "ISO 9001" for quality control and quality assurance in the manufacture of CUPLA products (Quick connect couplings) as well as 1kW or smaller Linear Drive air compressors, vacuum pumps and applied products, and in November 2001 "ISO 14001", also awarded International Standard environment management systems for intended to perform global environment preservation and pollution control.

# NITTO KOHKI INDUSTRY (THAILAND) CO., LTD.

Production of CUPLA, Air Compressors, and Vacuum Pumps

# ISO 14001 & 9001

NITTO KOHKI INDUSTRY (THAILAND) CO., LTD. factory is accredited under ISO 14000 and ISO 9001.

# From Development to Production, Management and Marketing of "CUPLA"

Nitto Kohki has introduced the "integrated product assurance system" that can respond promptly to "users' requirements" by covering the range of development, quality control, production and marketing in order to ensure supply of high-performance high-quality "CUPLA".

Headquarters and R & D Laboratory

Nitto Kohki's Integrated Product Assurance System

# **Research and Development**

The needs of the time and the latest information are gathered and analyzed, and unique technology is utilized to the challenge for ceaseless developement of better CUPLA, CUPLA that suggest new applications.

# Quality Control

The careful selection of materials, painstaking pursuit of machining precision, and strict surveillance processes such as severe endurance tests have earned trust for our CUPLA as a global brand.

# Production

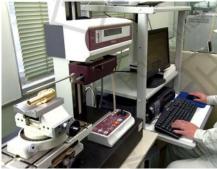

High-grade, rationalized, and integrated production system extends from the machining of parts to the assembly and testing of completed products. Robots that we make ourselves for our own plants and many other state-of-the-art facilities that cannot be seen elsewhere have marvelous capacity for mass production. And with them all, we aim to be an establishment of a flexible supply system.

Tochigi Nitto Kohki factory is accredited under ISO 14001 & 9001.

# Marketing

Meticulous marketing activities include advertising in the general industrial press and specialist papers, national and local exhibitions, training sessions, catalogs, promotion videos, other presentation tools and technical data sheets for new launches, and unique yet dynamic campaigns, etc.

# Nitto Kohki's Laborsaving Products

Nitto Kohki is capturing the needs of users by introducing to the world not only "CUPLA" quick connect couplings, but also next-generation laborsaving devices, including various "machine tools and hand tools", high precision "Delvo" electric screwdrivers, and linear-motor-driven piston "compressors / vacuum pumps".

# Nitto Kohki's Quality Products

# Machines and Tools to Achieve Energy and Labor Savings in Processing Work

Machines and tools are used at various processing sites for such work as cutting, polishing, scaling, drilling and chamfering of steel materials. We have created a product line up of pneumatic, electric and hydraulic machines and tools to match the diversification of processing methods and the conditions of work operations.

# High Precision "delvo" Electric Screwdrivers for Professional Use

NITTO KOHKI Electric Screwdrivers "delvo" are high-quality tools for professional use, with special emphasis on precise control of torque and long life. They apply just the correct amount of torque –with sure, positive control always at your fingertips. They are smooth and shockless in operation, too.

# Compressors, Vacuum Pumps and Their Applied Products

NITTO KOHKI pumps are unique products featuring a linear-motor-driven free piston system. NITTO KOHKI has made available a complete series of air compressors and suction pumps that incorporate this uniquely functional design. These are quite appropriate as air sources or suction power units for various pneumatically operated equipment and apparatus in advanced industries.

# Safety Guide

# Safety Precautions

The safety precautions provide instructions for the safe use of NITTO KOHKI coupling "CUPLA" to avoid the potential danger of bodily harm or damage to surrounding property. The safety precautions are categorized under the headings Danger, Warning and Caution, in accordance with the degree of potential hazard to the body or surrounding property, if CUPLA is used incorrectly. They are all important notes for safety and must be followed as well as in accordance with International standards #1 and other local safety regulations #2.

 #1: ISO 4413, Hydraulic Fluid Power – General rules relating to systems
 ISO 4414, Pneumatic Fluid Power – General rules relating to systems

 #2: Industrial Health & Safety law (for example)
 ISO 4414, Pneumatic Fluid Power – General rules relating to systems

# 1 DANGER

Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

# **⚠** WARNING

Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

# **A**CAUTION

Indicates a potentially hazardous situation which, if not avoided, may result in personal injury or property damage.

# **A**DANGER

Stop using the product immediately if there is any anticipated danger of operation or reduced safety.

# **MARNING**

The enclosed safety precautions are only a guideline. When using CUPLA, you are requested to pay particular attention to possible hazardous situations for the application which are not stated in the safety precautions.

# **Caution When Selecting CUPLA**

# 🕂 DANGER

Connection to a coupling of another brand may cause imperfect connection or disconnection, reduced air tightness, impaired pressure resistance or durability, reduced flow rate and potentially result in an unexpected accident and therefore must be avoided. Nitto Kohki cannot accept liability for any accident that may result by mixed use with the coupling of another brand. Please be sure to check for our marks on the right hand side of this page, which are always inscribed on NITTO KOHKI coupling "CUPLA" when you order and purchase.
 Do not use CUPLA under conditions and environments other than specified in the catalog.

# **WARNING**

- Please consult us prior to use if CUPLA is required for use on machines, equipment or systems (hereafter referred to as "equipment, systems, etc.") for sustaining or controlling human life or body.
- When CUPLA is used for the purpose of ensuring safety, please consult us beforehand.
- The compatibility of the product with specific equipment, systems, etc. must be determined by the person designing the equipment, systems, etc. or the person who decides its specifications based on necessary analysis and lest result. The expected performance and safety assurance of the equipment, systems, etc. will be the responsibility of the person who have the based to the equipment is the person who have the perso
- who has determined its compatibility with the product.
- If CUPLA is to be used for the following applications, please consult us:
- Vehicles, aircraft and associated equipment systems that accommodate people
   Medical facilities or suction equipment that directly affects human body
- Equipment that directly comes into contact with and runs food, drugs or medicines, drinking water, atomic energy equipment or equipment that ensures safety
- Selecting the wrong type of seal material may cause a leak. In making your selection, please check the compatibility of the seal material with the type of fluid and temperature used in the application.
- •Please consult us prior to selection or use of CUPLA when they are intended for use with corrosive or flammable gases/liquids and/or in atmospheres of these types of gases and liquids.

## Warranty and Disclaimer

- Our responsibilities for the defects in our products shall be as follows:
- We shall be responsible for any defects in design, material or workmanship of our products, if it is apparent that such defects are due to reasons solely attributable to us.
   Our responsibilities shall be limited to one of the following, as determined by us:
- (a) repair of any defective products or parts thereof,
- (b) replacement of any defective products or parts thereof; or
- (c) compensation for loss and damages incurred by you, which shall in no case exceed the amount of your purchase price for the defective products.
- We shall in no case be liable for any special, indirect or consequential loss or damages, whether such loss or damages are those arising from work stoppage, impairment of other
- goods or death or personal injury.

# Performance, Dimensions and Its Limitation

Please note the performance charts and outside dimensions in this catalog do not take into account any tolerances found in mass production The information is an average or standard value to be a guide for selecting models and to enable technical appraisal by users.

# **Beware of Imitations**

Recently, similar products which invite misidentification or confusion with NITTO KOHKI coupling "CUPLA" have appeared on the market. Connection with such a similar product to NITTO KOHKI coupling "CUPLA" may cause:

- Imperfect connection or disconnection
- 2. Reduced air tightness
- 3. Impaired pressure resistance or durability
- 4. Reduced flow rate
- and could result in unexpected accidents.
- Therefore, connection other than with NITTO KOHKI coupling "CUPLA" must be avoided

Please be sure to check for our original marks on the right hand side of this page, which are always inscribed on NITTO KOHKI coupling "CUPLA" products, when you order and purchase.

Note:

Nitto Kohki cannot accept any liability for any accident that may occur as a result of using couplings of another brand in conjunction with our own.

Markings

# Safety Guide

The following precautions must be taken when using CUPLA. Please contact Nitto Kohki or the outlet / supplier where you purchased the product with regard to repair procedures, certification on the specification or applications of the products.

# Precautions Relating to the Use of All CUPLA products

Be sure to read the "Instruction Sheet" that comes with the product or "Caution" on the package before use.

# **CUPLA for Low Pressure (Air)**

### \Lambda Caution

- A control use, check the compatibility of the seal material and body material against the temperature and the fluid to be used. Selecting the wrong seal material will lead to leakage. As to the use of any special paint or solvent, make thoroughly sure of the material compatibility.
  D not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
  O'nly use CUPLA that are within their rated temperature range. Otherwise this can lead to leakage through seal deterioration or damage. It cannot be used continuously at its lowest or highest rated working temperature.
  The durability of CUPLA differs depending on the operating environment and conditions (pressure and temperature etc.). In decessary, conduct performance evaluation test under your actual operating environment and conditions. Also, stress corrosion cracking may occur if used under corrosive environment. Take note of usage conditions.
  The working pressure and working temperature range for hose connection types depends upon the hose to be used. Prior to use, confirm that the temperature and the type of fluid to be used is suitable for the hose.
  When cleaning CUPLA, care must be taken not to use any material that will affect the seal and body materials.
  Apply a fluoropolymer resin sealant tape on male tapered pipe threads to ensure no leak. (Applies to thread type)
  Do not see dare to ecommended maximum torque when screwing in to the male or female thread of ICUPA for installation. It will cause damage. (Applies to thread type, Nut type)
  Gare must be taken when installing CUPLA not to vertightem or cross thread, this can cause damage and lead to leakage. (Applies to thread type, Nut type).
  Do not use damaged (racked) or deteriorated hoses or tube. This could cause paor connection. (Applies to hose or tube filter connection type)
  Never stick CUPLA when inserting tabe (IdI) into hoses or tubes. This could cause paor connection. (A

- Out on the hose or tube if a designated length more than the end when reusing it. Particle to do so will lead to fearage or bursting or the nose of tube it.
   Prior to use, always perform a leak test after installing CUPLA.
   After connection, try to pull the socket and plug apart to confirm secure connection. If the connection is incomplete, the socket and plug apart to confirm secure connection. If the medium is a gas, an audible bang may be heard on disconnection. We recommend disconnecting this CUPLA in an unpressurized state. (Except for CUPLA with purge function)
   Put a designated dust cap on CUPLA after disconnection when there is a possibility of foreign matter such as dirt sticking to the seal surface.
   Always install a shut-off valve between the pressure source and CUPLA.
   On on use with any fluid or benefitied on the one source of the socket and plug apart to confirm secure and contents.

- . Do not use with any fluid or medium other than what is specified, to do so could cause leakage or damage

- Do not use with any indu or medium other than what's specified, to do so could cause leakage or damage.
   The use of initine filters is strongly advised and recommended. To prevent damage, the fluid should be clean before reaching CUPLA.
   Always let fluid flow from socket to plug. It will result in reduced flow, (Except for HI CUPLA Two Way Type)
   Do not use CUPLA in areas or environment where dust such as sand or metal powder can get in to CUPLA. It will lead to malfunction or leakage
   Do not the CUPLA in the society of the store and the sealing parts will cause leakage.
   Do not drop CUPLA. It will cause leakage or malfunction cause leakage or damage.
   Connecting CUPLA the vibration or immediate any cause as and er damage.
   Connecting CUPLA the vibration or immediation and the sealing parts will cause leakage.
   Do not drop CUPLA. It will cause leakage or malfunction.

- Connecting CUPLA in whice dause leakage or manufactor. Connecting CUPLA directly to vibrating or impacting equipment will result in reduced lifetime. The use of a 'Leader' or 'Whip' hose of approx. 30 cm in length between CUPLA and equipment is recommended to help alleviate this. Use only as quick connect couplings for fluid pipelines. (It cannot be used as a swivel joint) Only use CUPLA in a combination with NITTO KOHKI coupling "CUPLA".
- Do not disassemble CUPLA. It will cause leakage or damage

# **Cautions on Handling CUPLA HOSE**

#### **A**Caution

- Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
  Only use CUPLA that are within their rated temperature range. Otherwise the hose will get damaged or deteriorate and cause leakage. It cannot be used continuously at its lowest or highest rated working temperature.
  Do not use on systems that have a high water content, such as drain discharge, this can damage the hose.
  The durability of the Hose differs depending on the operating environment and conditions (pressure and temperature etc.). If necessary, conduct performance evaluation test under your actual operating environment and conditions.
  Make sure that there is no twist or bend on the hose before use.
  Do not exceed the maximum extensible length, to do so will damage the hose. See catalogue page for full specification details. (Applies to NK CUPLA COIL HOSE)
  Do not bend the hose less than the minimum-bending radius. It will cause damage to the hose.
  The use of inline filters is strongly advised and recommended. To prevent damage, the fluid should be clean before reaching CUPLA. The inclusion of foreign matter in the fluid could damage the hose.
  Do not use cUPLA in areas or environment where dust such as a and or metal powder can get in to CUPLA. This may cause damage to the hose.
  Do not use cure to damage to the hose will as a sand or metal powder can get in to CUPLA. This may cause damage to the hose.
  Do not use cure to damage to the hose damage to the hose.

- Up not use near me. It will soften or deform the nose and cause damage to the hose.
   Take care not to damage the hose by dragging over rough ground or concrete. It is also important to ensure that the hose does not become kinked or crushed for long periods.
   Do not use for lifting or hoisting, this can damage the hose.
   Store in a shaded, dry and well-ventilated place.
   Cut off the hose at least 30 m from the end when reusing it. Failure to do so will lead to leakage or bursting of the hose.
   Prior to use, always perform a leak test after installing CUPLA.

## **CUPLA for Oxygen / Fuel Gas**

#### **Marning**

- Do not use with any fluid or medium other than what is specified, to do so could cause leakage or damage.
  Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
  Replace CUPLA with a new one if backfire occurs. Backfire damages the body and the seal and will lead to leakage or damage.
  Do not use damaged(cracked) or detoriorated hoses. It will lead to leakage or busing of hoses. (Applies to hose barb type)
  Never let oil adhere to CUPLA with a new one if backfire damages and seal and will lead to leakage or aut. Incomplete insertion or insufficient clamping will lead to leakage or sliding off of a hose from the barb (tail). (Applies to hose barb type)
  Never let oil adhere to CUPLA when installing a hose clamp or a nut. Incomplete insertion or insufficient clamping will lead to leakage or sliding off of a hose from the barb (tail). (Applies to hose barb type)
  Prior to use, always perform a leak test after installing CUPLA. Always check for leakage or DUPLA before use. If any leakage is found, stop using immediately.
  Cut off the hose at least 3 cm from the end when reusing it. Failure to do so will lead to leakage or bursting of the hose. (Applies to hose barb type)
  Do not use CUPLA are fire or places where gas accumulates. It will eals to leakage or bursting of the hose. (Applies to hose barb type)
  Make sure that the valve on the torch is closed before connecting to CUPLA. If connected with valve open, the gas will flow out and could cause a fire or explosion.
  Do not disassemble CUPLA. It will cause leakage or damage.

#### **A** Caution

- Only use CUPLA that are within their rated temperature range. Otherwise this can lead to leakage through seal deterioration or damage. It cannot be used continuously at its lowest or highest rated working temperature.
   The durability of CUPLA differs depending on the operating environment and conditions (pressure and temperature etc.). If necessary, conduct performance evaluation test under your actual operating environment and conditions. Also, stress corrosion cracking may occur if used under corrosive environment. Take note of usage conditions.
   Make sure that O-rings and Packing seals are lubricated with our designated lubricant at all times. The O-rings will get damaged and cause leakage. Not using the designated lubricant will lead to spontaneous fire. (Ask us for the designated lubricant)
   Apply a fluoropolymer resin sealant tape on male tapered pipe threads to ensure no leak. (Applies to thread type)
   Do not exceed the recommended maximum torque when screwing in to the male or female thread of CUPLA for installation. It will cause damage. (Except for hose barb type)

- Do not exceed the recommended maximum torque when screwing in to the male or female thread of CUPLA for installation. It will cause damage. (Except for hose barb type)
  Do not use anything other than the applicable hose sizes. It will cause leakage. (Applies to hose barb type)
  Never strike CUPLA when inserting barb (tail) into hose. This could cause poor connection. (Applies to hose barb type)
  Do not use damaged (cracked) or deteriorated hoses. It will cause leakage. (Applies to hose barb type)
  After connection, try to pull the socket and plug apart to confirm secure connection. It the connection is incomplete, the socket and plug may disconnect when pressurized.
  Care should be taken when disconnecting CUPLA whilst still pressurized. To prevent injury due to the Plug popping out, CUPLA should be held firmly in one hand and the Plug in the other. If the medium is a gas, an audible bang may be heard on disconnection. We recommend disconnecting this CUPLA in an unpressurized state.
  Always istill a shut-off valve between the pressure source and the socket.
  The use of inline filters is strongly advised and recommended. To prevent damage, the fluid should be clean before reaching CUPLA.
  Always lest fluid flow from socket to plug. It will result in reduced flow.
  Do not use CUPLA in areas or environment where dust such as sand or metal powder can get in to CUPLA. It will cause enalturation or leakage.
  Do not apply any artificial impact, bend or tension. It will cause leakage or damage.
  Do not apply any antificial impact, bend or tension. It will cause leakage.
  Do not apply any antificial impact. Bend or tension. It will cause leakage or damage.

- Do not drop CUPLA. It will cause leakage or malfunction.
   Connecting CUPLA directly to vibrating or impacting equipment will result in reduced lifetime.
   Use only as quick connect couplings for fluid pipelines. (It cannot be used as a swivel joint)
   Only use CUPLA in a combination with NITTO KOHKI coupling "CUPLA".
   Store CUPLA in a dry environment. Moisture will cause corrosion and may also freeze in low temperatures, which may cause malfunction of CUPLA or other equipment.

# Precautions Relating to the Use of All CUPLA products

Be sure to read the "Instruction Sheet" that comes with the product or "Caution" on the package before use.

# MOLD CUPLA / FLOW METER / HOT WATER CUPLA

### \Lambda Warning

Do not apply pressure to CUPLA socket while it is disconnected. It will cause leakage or damage. (Applies to MOLD CUPLA or HOT WATER CUPLA)
 Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
 The fluid in the piping of the plug side will spill out upon disconnection. When using for hazardous fluids (such as hot fluid), discharge all the fluid inside CUPLA before disconnecting, in order to prevent burns, etc. (Applies to MOLD CUPLA)

### **∧** Caution

- Prior to use, check the compatibility of the seal material and body material against the temperature and the fluid to be used. Selecting the wrong seal material will lead to leakage.
   As to the use of any special paint or solvent, make thoroughly sure of the material compatibility.
   Only use CUPLA that are within their rated temperature range. Otherwise this can lead to leakage through seal deterioration or damage. It cannot be used continuously at its lowest or highest rated working temperature.
   Even it used within the rated operating temperature range, prolonged use of the FLOW METER when under pressure and with the temperature range through seal for used to use of within the rated operating temperature and performance without the temperature in the upper regions will cause leakage. (Especially when the valve is fully open)
   The durability of CUPLA or FLOW METER differs depending on the operating environment and conditions (pressure and temperature etc.). If necessary, conduct performance evaluation test under your actual operating environment.
- ment and conditions
- Unity use CUPLA that are writin the rated contemporator range. Otherwise this can lead to leakage incough seal determination of damage. It cannot be used continuously at its lowest on impliest rated working temperature range. Otherwise taily open its lowest on impliest rated working temperature range. Units of the content regions will accuse leakage. (Expected leakage. Expected leakage leakage. Expected leakage leakage. Expected le

## CUPLA for Low Pressure (Water, Liquid) and for Medium Pressure

#### A Warning

- Do not apply pressure to CUPLA socket or plug while they are disconnected. It will cause leakage or damage. (Applies to Valve Structures: Two-way shut-off type and One-way shut-off type)
- Do not use CUPLA continuously exceeding the tated working pressure. It will cause leakage or damage.
   The fluid in the piping will spill out upon disconnection. When using for hazardous fluids (such as hot fluid), discharge all the fluid inside CUPLA before disconnecting, in order to prevent burns, etc.
   (Applies to Valve Structures: Straight through type and One-way shut-off type)

#### ▲ Caution

- · Prior to use, check the compatibility of the seal material and body material against the temperature and the fluid to be used. Selecting the wrong seal material will lead to leakage

- Prior to use, check the companishing of the sear material and body material agains the temperature and the full to be used. Selecting the wrong sear material will lead to leakage.
  As to the use of any special paint or solvent, make thoroughly sure of the material compatibility.
  Only use CUPLA that are within their rated temperature range. Otherwise this can lead to leakage through seal deterioration or damage. It cannot be used continuously at its lowest or highest rated working temperature.
  Even if used within the rated operating temperature range, prolonged use of TSP CUPLA Socket with Ball Valve when under pressure and with the temperature in the upper regions will cause leakage. (Especially when the valve is fully open)
  The durability of CUPLA differs depending on the operating environment and conditions.
  Also, stress corrosion cracking may occur if used under corrosive environment. Take note of usage conditions.
  The working pressure and working temperature range for hose or tube connection types depends upon the hose or tube.
  Wree denome CUPLA are much be tube as working temperature eacl and both metricing.
- When cleaning CUPLA, care must be taken not to use any material that will affect the seal and body materials.

- When cleaning UPLA, care must be taken not to use any material has will affect the seal and body materials.
  Make sure that O-rings and Packing seals are lubricated with grease at all times. If not, the O-rings will get damaged and cause leakage. (Except CUPLA with end face seal construction)
  Apply a floropolymer resis be taken not to use any material that will affect the seal and body materials.
  To not exceed the recommended maximum torque when screwing in to the any reductive data by performance. (Applies to thread type)
  Do not exceed the recommended maximum torque when screwing in to the male or female thread of CUPLA for installation. It will cause damage.
  When installing TSP CUPLA Socket with Ball Valve, in order to protect the spherical surface of the ball valve, install it with the valve in a fully open or closed, there will be a void between valve body and the ball valve, install it with the valve in a fully open or closed, there will be a void between valve body and the ball valve, inclusion and target of the valve is fully open or closed, there will be a void between valve body and the ball valve in othose or tube filter connection type)
  On on use anything other than the applicable hose or tube sizes. It will cause leakage. (Applies to thread type, Nut type, specially body material: stainless steel)
  When installing the body off from the piping, partially open the valve to allow the pressure to discharge. (Applies to TSP CUPLA Socket with Ball Valve)
  Do not use anything other than the applicable hose or tube sizes. It will cause leakage. (Applies to thread type, Nut type, specially off a hose or a tube from the barb (tail). (Applies to hose or tube fitter connection type)
  Never strike (CUPLA when inserting barb (tail) into hose or a tube and secure to discharge or bursting of hoses or tube fitter connection type)
  Ou on tuse damaged (cracked) or deteriorated hoses or tubes. It will lead to leakage or bursti

- (Applies to hose or tube fitter connection type) Prior to use, always perform a leak test after installing CUPLA.

- Prior to use, always periorm a leak test after installing CUPLA.
   After connection, fity to pull the socket and plug apart to confirm secure connection. If the connection is incomplete, the socket and plug apart to confirm secure connection. If the connection is incomplete, the socket and plug may disconnect when pressurized.
   Put a designated dust cap on CUPLA after disconnection when there is a possibility of foreign matter such as dirt sticking to the seal surface.
   Do not connect/disconnect with fluid still under dynamic pressure or static residual pressure. It will cause damage to the valve. (Applies to Valve Structures: Two-way shut-off type and One-way shut-off type)
   Always install a shut-off valve between the pressure source and CUPLA.
   Do not strike the tip of an automatic shut-off valve with a harmer or a similar tool. It will cause leakage or malfunction.
   (Applies to medium pressure, Valve Structure: Two-way shut-off type) However, if you need to relieve residual pressure, please consult us.

- (Applies to frequency backstop with any flat or way structure type) however, in you need resolute pressure, presse consult us.
  O not use with any flat or medium other than what is specified, to do so could cause leakage or damage.
  Use it in the state that the fluid does not freeze in the case of water. If it freezes, it will cause damage to CUPLA.
  The use of initine filters is strongly advised and recommended. To prevent damage, the fluid should be clean before reaching CUPLA.
  Design and keep the fluid flow speed through CUPLA below 8 m/s. It will cause damage to the valve if used at 8m/s or over. (Applies to Valve Structures: Two-way shut-off type and One-way shut-off type).
  When using TSP CUPLA Socket with Ball Valve, operate the ball valve slowly to prevent water hammer from occurring. Also be careful not to get fingers caught when operating the handle.
  Do not use CUPLA in areas or environment where dust such as sand or metal powder can get in to CUPLA. It will lead to malfunction or leakage.
  Do not use to the use environment where dust such as sand or metal powder can get in to CUPLA. It will lead to malfunction or leakage.
  Do not use to the use environment or cleakage.
  Do not use CUPLA. It will cause malfunction or leakage.

- Do not let paint stick to CUPLA. It will cause malfunction or leakage.
   Be careful not to put scratches or dents on CUPLA. Especially, scratches on the sealing parts will cause leakage.
   Do not apply any artificial impact, bend or tension. It will cause leakage or damage.
   Do not drop CUPLA. It will cause leakage or malfunction.
   Connecting CUPLA cortex by oriversting or impacting equipment will result in reduced lifetime.
   Use only as quick connect couplings for fluid pipelines. (It cannot be used as a swivel joint)
   On ot use CUPLA in a combination with NITTO KOHKI coupring "CUPLA". (Except LEVER LOCK CUPLA)
   Ob on ot disassemble CUPLA. It will cause leakage or ensure that the valve is fully open. If stored with the valve partially open, the packing will deform and cause leakage.

# Safety Guide

# Precautions Relating to the Use of All CUPLA products

Be sure to read the "Instruction Sheet" that comes with the product or "Caution" on the package before use.

# **CUPLA for High Pressure**

## 🕂 Danger

· Do not apply pressure to CUPLA socket or plug while they are disconnected. It will cause leakage or damage

### **Marning**

- Do not use CUPLA continuously exceeding the rated working pressure. Also, do not use 700R CUPLA in an environment where there is impulse pressure. It will cause leakage or damage
   Do not connect/disconnect with fluid still under dynamic pressure or static residual pressure. It will cause damage to the valve. However, the HSP-PV type can be connected under static residual pressure. It will cause damage to the valve. However, the HSP-PV type can be connected under static residual pressure on ection. If the connection is incomplete, the socket and plug may disconnect when pressurized.
   Only use CUPLA in a combination with NITTO KOHKI coupling "CUPLA". However, 280 CUPLA is interchangeable with couplers complying with ISO7241-1A.
   When using by connecting 280 CUPLA with other brand's, compare the pressure specifications and use under the lower pressure.
   Do not disassemble CUPLA. It will cause leakage or damage. rosidual r

#### ▲ Caution

- Curtion

   Prior to use, check the compatibility of the seal material and body material against the temperature and the fluid to be used. Selecting the wrong seal material will lead to leakage.
   As to the use of any special paint or solvent, make thoroughly sure of the material compatibility.
   Only use CUPLA that are within their rated temperature range. Otherwise this can lead to leakage through seal deterioration or damage. It cannot be used continuously at its lowest or highest rated working temperature.
   The durability of CUPLA differs depending on the operating environment and conditions (pressure and temperature etc.). If necessary, conduct performance evaluation test under your actual operating environment and conditions.
   Also, stress corrosion cracking may occur if used under corrosive environment. Take note of usage conditions.
   When cleaning CUPLA, care must be taken not to use any material that will affect the seal and body materials.
   Apply a fluoropolymer resin sealant tape on male tapered pipe threads to ensure no feak.
   Do not exceed the recommended maximum forque when screwing in to the male or female thread of CUPLA for installation. It will cause damage.
   Care must be taken when installing CUPLA. Not to vertipatien or cross thread, this can cause damage and lead to leakage. (Applies to HSU CUPLA, S210 CUPLA)
   Prior to use, always perform a leak test after installing CUPLA.
   Prior to use, always perform a leak test after installing CUPLA.
   Put a designated dust cap on CUPLA after disconnection when there is a possibility of foreign matter such as dirt sticking to the seal surface.
   Aways install a shut-off wave between the pressure is ource and CUPLA.

- Put a designated dust cap on CUPLA after disconnection when there is a possibility of foreign matter such as dirt sticking to the seal surface.
  Always install a shut-off valve between the pressure source and CUPLA.
  Do not strike the tip of an automatic shut-off valve with a hammer or a similar tool. It will cause leakage or mafunction. However, if you need to relieve residual pressure, please consult us.
  Do not strike the tip of an automatic shut-off valve with a hammer or a similar tool. It will cause leakage or damage. Do not use 280 CUPLA with water-glycol operating oil. The plating will dissolve.
  Use it in the state that the fluid does not freeze in the case of water. If it freezes, it will cause damage to CUPLA.
  The use of inline filters is strongly advised and recommended. To prevent damage, the fluid should be clean before reaching CUPLA.
  Design and keep the fluid flow speed through CUPLA below 8 m/s. It will cause damage to the valve if used at 8 m/s or over.
  Do not use CUPLA in areas or environment where dust such as sand or metal powder can get in to CUPLA. It will lead to malfunction or leakage.
  Do not use CUPLA in areas or environment where dust such as sand or metal powder can get in to CUPLA. It will lead to malfunction or leakage.

- Do not use CUPLA in areas or environment where dust such as sand or metal powder can get in to CUPLA. It will lead to malfunction or leakage.
  Do not tele paint stick to CUPLA. It will acuse malfunction or leakage.
  Be careful not to put scratches or dents on CUPLA. Scratches on the sealing parts will cause leakage. Especially, be careful about the seating surface of HSP CUPLA with male parallel thread with 30° flare.
  Do not apply any artificial impact, bend or tension. It will cause leakage or damage.
  Do not apply any artificial impact, bend or tension. It will cause leakage or damage.
  Do not apply any artificial impact, bend or tension. It will eakage or damage.
  So not drop CUPLA. It will cause leakage or malfunction. If a FLAT FACE CUPLA FP plug is dropped, there is a possibility that the valve may open, to re-set, connect the Socket to the Plug and disconnect, the valve will return to its original post.
  Connecting CUPLA directly to vibrating or impacting equipment will result in reduced lifetime.
  Use only as guick connect couplings for fluid pipelines. (It cannot be used as a swivel joint)
  When using OPAIn sets for GP Type or GS Type of HSP CUPLA will slightly leak when not coupled.
  Contact us when using CUPLA for high pressure cases.

- Contact us when using CUPLA for high pressure gases.

## **MULTI CUPLA Series**

#### **Overall MULTI CUPLA**

#### **A** Caution

- · Prior to use, check the compatibility of the seal material and body material against the temperature and the fluid to be used. Selecting the wrong seal material will lead to leakage.
- Prior to use, check the compatibility of the seal material and body material against the temperature and the fluid to be used. Selecting the wrong seal material will lead to leakage.
   As to the use of any special paint or solvent, make throughly sure of the material compatibility.
   Only use CUPLA that are within their rated temperature range. Otherwise this can lead to leakage through seal deterioration or damage. It cannot be used continuously at its lowest or highest rated working temperature.
   The durability of CUPLA differs depending on the operating environment and conditions (pressure and temperature etc.). If necessary, conduct performance evaluation test under your actual operating environment and conditions. Also, stress corrosion cracking may occur if used under corrosive environment. Take note of usage conditions.
   When cleaning CUPLA, care must be taken not to use any material that will affect the seal and body materials.
   Apply a fluoropolymer resin sealant tape on male tapered pipe threads to ensure no leak. (Applies to Snap ring mount Type, MAM Type, MAM-B Type)
   Do not exceed the recommended maximum torque when screwing in to the male or female thread of CUPLA for installation. It will cause damage.
   Prior to use, always perform a leak test after installing CUPLA.

- Prior to use, always perform a leak test after installing CUPLA.
   Always install a shut-off valve between the pressure source and CUPA.
   Do not use with any fluid or medium other than what is specified, to do so could cause leakage or damage.
   The use of inline filters is strongly advised and recommended. To prevent damage, the fluid should be clean before reaching CUPLA.
   Do not use of UPLA in areas or environment where dust such as sand or metal powder can get in to CUPLA. It will lead to malfunction
   Do not use OUPLA in the set or environment where dust such as sand or metal powder can get in to CUPLA. It will lead to malfunction
   Do not use to paint stick to CUPLA, it will cause malfunction or leakage.
   Be careful not to put scratches or dents on CUPLA. Scratches on the sealing parts will cause leakage.
   Connecting CUPLA directly to vibrating or impacting equipment will result in reduced lifetime.
   Use only as quick connect couplings for fluid pipelines.
   Outly use CUPLA in a combination with NITTO KOHKI coupling "CUPLA". on or leakage

#### MAM Type

### 🕂 Warning

Do not connect/disconnect with fluid still under dynamic pressure or static residual pressure exceeding the maximum working pressure. It will cause damage to CUPLA
 Do not drop MULTI CUPLA. It will cause deformation of the plate.

### **Caution**

- · Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
- Up not use CUPLA commutously exceeding the rated working pressure. It will cause leakage or damage.
   Make sure that O-rings and Packing seals are lubricated with grease or oil at all times. If not, the O-rings will get damaged and cause leakage.
   Do not deform the stop ring when installing CUPLA. It he stop ring is widened, it may come off from its groove and lead to poor connection or damage of CUPLA. Also change the stop ring with a new one when replacing CUPLA.
   Iso and deform the stop ring when installing CUPLA. It he stop ring is widened, it may come off from its groove and lead to poor connection or damage of CUPLA. Also change the stop ring with a new one when replacing CUPLA.
   Connect after making sure that the lever is in the "connect" position.
   Do not disassemble CUPLA. It will cause breakage.
   Do not disassemble CUPLA. It will cause leakage or damage.

# MAM-A Type / MAM-B Type

### 🗥 Warning

- O Do not connect or disconnect CUPLA while they are pressurized or residual pressure of more than 0.6 MPa remains. It will cause damage to CUPLA.
   O Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
   O Do not drop MULTI CUPLA. It will cause deformation of the plate.

### **∧** Caution

- Make sure that O-rings and Packing seals are lubricated with grease or oil at all times. If not, the O-rings will get damaged and cause leakage.
   Install the C type retaining ring by using a pair of snap ring pilers. If the C type retaining ring are expanded too much, it will come off from its groove and lead to poor connection or breakage. Also change the retaining ring with a new
   Install hose symmetrically from the locking unit when they are connected to CUPLA in order to distribute the reaction force eventy. Failure to do so will lead to breakage.
   Connect after making sure that the lever is in the "connect" position. It will not connect if it is not in the "connect" position.
- Do not force turning the lever. It will cause breakage. Do not strike the tip of an automatic shut-off valve with a hammer or a similar tool. It will cause leakage or malfunction.
- Use it in the state that the fluid does not freeze in the case of water. If it freezes, it will cause damage to CUPLA
- Design and keep the fluid flow speed through CUPLA below 8 m/s. It will cause damage to the valve if used at 8 m/s or over.
   Do not disassemble CUPLA. It will cause leakage or damage.

# Precautions Relating to the Use of All CUPLA products

Be sure to read the "Instruction Sheet" that comes with the product or "Caution" on the package before use.

## **MULTI CUPLA Series**

## MAS Type / MAT Type -

### 🕂 Warning

Do not apply pressure to CUPLA socket or plug while they are disconnected, It will cause leakage or damage.
 Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.

#### ▲ Caution

- Caution
   Make sure that O-rings and Packing seals are lubricated with grease or oil at all times. If not, the O-rings will get damaged and cause leakage.
   Keep the content axis excentricity of the Socket and Plug within 0.6 mm diameter. Failure to do so will lead to leakage or breakage.
   Install the C type retaining ring by using a pair of snap ring pliers. If the C type retaining ring are expanded too much, it will come off from its groove and lead to poor connection or breakage.
   Install the C type retaining ring by using a pair of snap ring pliers. If the C type retaining ring are expanded too much, it will come off from its groove and lead to poor connection or breakage.
   Also change the retaining ring by using a pair of snap ring pliers. If the C type retaining ring are expanded too much, it will come off from its groove and lead to poor connection or breakage.
   Also change the retaining ring the new one when replacing CUPLA. (Applies to MAS Type CUPLA)
   Care must be taken when installing CUPLA not to overtighten or cross thread, this can cause damage dial lead to leakage.
   When connecting, connect socket and plug together tightly without a gap. If the gap exceeds 0.5 mm the flow will be reduced.
   For the load required to maintain connection, set the size the set were MAS Type / MAT Type is described. Connection exceeding the maximum acceptable load will cause breakage.
   Connectifus pelow the minimum load required to maintain connection will result in reduced flow.
   O not connect/disconnect with fluid still under dynamic pressure or still rescue pressure or state residual pressure. It will cause leakage or malfunction.
   Use it in the state that the fluid does not freeze in the case of water. If it freezes, it will cause damage to the valve if used at 8 m/s or over.
   Do not droop CUPLA. It will cause leakage or malfunction.
   Design and keep the fluid flow speed through CUPLA below 8 m/s. It will cause damage to the valve if used at 8 m/s or over.
   Do not dro

## MALC-01 Type

#### **Caution**

- O not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
   Keep the center axis eccentricity of the Socket, Plug and/or hole in the plate within 2 mm diameter. Failure to do so will lead to leakage or breakage.
   For the dimensions of end configurations for processing on plates, see the page in this catalog where MALC-01 Type is described.
   Obliquity of socket and plug must be within 0.5 degrees during connection. If installed exceeding 0.5 degrees, it will cause leakage or damage.
   When connecting, connect socket and plug together tightly without a gap. However, it can be used even when the gap is 0.5 mm. If the gap exceeds 0.5 mm the flow will be reduced.
   For the load required to maintain connection when CUPLA is connected, see the page in this catalog where MALC-01 Type is described.
   Connecting to how the flow will be reduced.
   For the load required to maintain connection when CUPLA is connected, see the page in this catalog where MALC-01 Type is described.
   Connecting to how the flow will be reduced to maintain connection to reduce and the required to maintain connection when CUPLA is connected.

- Por the load required to maintain connection when CUPLA is connected, see the page in this catalog where whice-or type is described. Connection exceeding the maximum acceptable load will cause or connection below the minimum load required to maintain connection will result in reduced flow.
   When using water, judge whether CUPLA can be used or not by conducting a performance evaluation test under your accuration generic transmission. Leakage may occur according to rust or foreign matter in the piping or solidified minerals. Use it in the state that the fluid does not freeze in the case of water. If it freezes, it will cause damage to CUPLA.
   Do not drop CUPLA. It will cause leakage or maffunction.
   Do not drop CUPLA. It will cause leakage or damage.

#### MALC-SP Type / MALC-HSP Type

#### **A** Danger

Do not use uncoupled socket or plug continuously exceeding its rated working pressure. It will cause leakage or damage. (Applies to MALC Type CUPLA)

#### A Warning

- Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
   Do not disassemble CUPLA. It will cause leakage or damage.

#### ▲ Caution

- Keep the center axis eccentricity of the Socket and Plug within 2 mm diameter. Failure to do so will lead to leakage or breakage.

- Keep the center axis eccentricity of the Socket and Plug within 2 mm diameter. Failure to do so will lead to leakage or breakage.
   Obliquity of socket and plug must be within 0.5 degrees during connection or disconnection. If install de cxeeding 0.5 degrees, it will cause leakage or damage.
   Install the C type retaining ring by using a pair of snap ring pilers. If the C type retaining rings are expanded too much, it will come off from its groove and lead to poor connection or breakage.
   Also change the retaining ring with a new one when replacing CUPLA. (Applies to Snap ring mount, Type)
   Care must be taken when installing CUPLA not to overlipten or cross thread, this can cause damage and lead to leakage. (Applies to MALC-SP Type CUPLA)
   When connecting, connect socket and plug together tightly without a gap. However, it can be used even when the gap is 0.5 mm. If the gap exceeds 0.5 mm the flow will be reduced.
   For the load required to maintain connection when CUPLA is connected, see the page in this catalog where MALC-SP Type to mALC-HSP Type is described.
   Connection exceeding the maximum acceptable load will cause breakage. Connecting below the minimum load required to maintain connection will result in reduced flow.
   Use it in the state that the fluid does not freeze in the case of water. If it freezes, it will cause leakage or cuPLA.
   Use it in the state that the fluid does not freeze in the case of water. If it resease, it will cause damage to the valve if used at 8 m/s or over.
   Do not drop CUPLA. It will cause leakage or malfunction.

# **SEMICON CUPLA Series**

#### A Warning

- On ont apply pressure to CUPLA socket or plug while they are disconnected. It will cause leakage or damage.
   Prior to use, check the compatibility of the seal material and body material against the temperature and the fluid to be used. Selecting the wrong seal material will lead to leakage.
   (The 'Seal Material Selection Table' and 'Body Material Selection Table' described in our product catalog is for reference only.)

- (The 'Seal Material Selection Table'' and 'Body Material Selection Table'' described in our product catalog is for reference only.)
  On ot use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
  Only use CUPLA that are within their rated temperature range. Otherwise this can lead to leakage through seal deterioration or damage. It cannot be used continuously at its lowest or highest rated working temperature.
  When using hazardous fluids, always wear protective clothing which are suitable for the fluid being used and will protect the whole body. Any spillage or leakage should be dealt with by an expert in that product.
  Do not concercidisconnect with fluid still under dynamic pressure or static residual pressure. It will cause leakage to the valve.
  When using pressure tanks, connect/disconnect as follows:
  Connection: Connect CUPLA on the nitrogen gas pressure to ambient pressure, and confirm that the internal pressure. Only after then, connect CUPLA on the liquid side.
  Disconnection: Reduce the nitrogen gas pressure to a similar tool. It will cause leakage or malfunction. However, if you need to relieve residual pressure, please consult us.

Be sure to read the "Instruction Sheet" that comes with the product or "Caution" on the package before use.

# **SEMICON CUPLA Series**

## **▲** Caution

- Do not apply any artificial impact, bend or tension. It will cause leakage or damage.
   Do not drop CUPLA. It will cause leakage or malfunction.
   Connecting CUPLA directly to vibrating or impacting equipment will result in reduced lifetime.
   Use only as quick connect couplings for fluid pipelines. (It cannot be used as a swivel joint)
   Do not disassemble CUPLA. It will cause leakage or damage.
- Check CUPLA regularly. Stop using immediately if anything unusual is found on CUPLA

## **CUPLA for Inert Gas**

#### 🗥 Warning

- Do not apply pressure to CUPLA socket or plug while they are disconnected. It will cause leakage or damage. (Applies to SP-V CUPLA)
   Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
   The fluid in the piping will spill out upon disconnection. Take extra care when using at places where it is liable to cause anoxia. (Applies to PCV PIPE CUPLA)

#### **Caution**

- Prior to use, check the compatibility of the seal material and body material against the temperature and the fluid to be used. Selecting the wrong seal material will lead to leakage.
   Only use CUPLA that are within their rated temperature range. Otherwise this can lead to leakage through seal deterioration or damage. It cannot be used continuously at its lowest or highest rated working temperature.
   The durability of CUPLA differs depending on the operating environment and conditions (pressure and temperature etc.). If necessary, conduct performance evaluation test under your actual operating environment and conditions. For PCV PIPE CUPLA, replace it with a new one after connection/disconnection of 5000 times as an approximate guide.
   When cleaning CUPLA, care must be taken not to use any material that will affect the seal and body materials.
   Apply threads sealants on male tapered pipe threads to ensure no leak.
   Do not exceed the recommended maximum torque when screwing in to the male or female thread of CUPLA for installation. It will cause damage.
   Care must be taken when installing CUPLA not to overtighten or cross thread, this can cause damage and lead to leakage. (Applies to SP-V CUPLA Body material: Stainless steel)
   Prior to use, always perform a leak test after installing CUPLA.
   Make sure that O-rings are lubricated with grease at all times. If not, the O-rings will get damaged and cause leakage. (Applies to SP-V CUPLA Body material: Stainless steel)
   For the purpose of reducing the instribution code on connection-or disma gread, apply a lubricant that is suitable for the operation of the prevent O-ring from damage, apply a lubricant the to servite the respection of the operational environment to the Plug tip and sealing surface. (Applies to SP-V CUPLA Seal material: Stainless to SP-V CUPLA Seal material: Stainless

- Make sure that O-rings are lubricated with figuress at all liters. If not, the O-rings will get damaged and cause leakage. (Applies to SP-V CUPLA seal materials:)
  For the purpose of reducing the insertion load on connection and to prevent O-ring from damage, apply a lubricant that is suitable for the operational environment to the Plug tip and sealing surface. (Applies to SP-V CUPLA Seal material: HNBR)
  Do not use pipe sizes other than the suffacted beizes. It will cause leakage. Contact us if required to use A luminum alloy pipes. (Applies to PCV PIEC CUPLA)
  Chamfer the edge of the copper pipe to be used. If not chamfered, it will damage the packing and cause leakage. Do not use pipes with deformation or burrs. It will lead to leakage or poor connection. (Applies to PCV PIEC CUPLA)
  When connecting, try to pult the socket and plug apart to confirm secure connection. If the connection is incomplete, the socket and plug apart to CUPLA and the apart to confirm secure connection. If the connection is incomplete, the socket and plug apart to CUPLA and regular pressure. (Applies to PCV PIEC CUPLA)
  On to disconnect with fluid still under dynamic pressure or static residual pressure.
  When connected with the copper pipe, do not rotate the pipe. It will damage the packing and cause leakage. (Applies to PCV PIEC CUPLA)
  When disconnected, store CUPLA after disconnection when there is a possibility of foreign matter such as dirt sticking to the seal surface. (Applies to SP-V CUPLA for per pipe, place and utor dynamic pressure source and CUPLA.
  Alwe sum the tore of under dynamic pressure or a static residual pressure.
  Applies to SP-V CUPLA after disconnection when there is a possibility of foreign matter such as dirt sticking to the seal surface. (Applies to SP-V CUPLA)
  Always instal a shut-off valve between the pressure source and CUPLA.
  Do not strike the tip of an automatic shut-off valve with a hammer or a similar t

- Do not let paint stick to CUPLA. It will cause malfunction or leakage.

- Do not let paint stick to CUPLA. It will cause mailunction or leakage.
   Be careful not to put scratches or dents on CUPLA. Especially, scratches on the sealing parts will cause leakage.
   Do not apply any artificial impact, bend or tension. It will cause leakage or damage.
   Connecting CUPLA directly to vibrating or impacting equipment will result in reduced lifetime.
   Stop using CUPLA directly to vibrating or impacting equipment will result in reduced lifetime.
   Stop using CUPLA directly to vibrating or impacting equipment will result in reduced lifetime.
   Stop using CUPLA directly to vibrating or swart that has adhered to the inside of CUPLA is removed after use. (Applies to PCV PIPE CUPLA)
   Use only as quick connect couplings for fluid pipelines. (It cannot be used as a swirel joint) (Applies to SP-V CUPLA)
   Only use CUPLA in a combination with NITTO KOHKI coupling "CUPLA". (Applies to SP-V CUPLA)
   On pot disessemble CUPLA. It will cause leakage or damage.
- Do not disassemble CUPLA. It will cause leakage or damage

# **PAINT CUPLA**

#### **Warning**

Make sure that a hose containing a ground wire is connected to a ground. Insufficient grounding will lead to fire or dangerous explosion caused by possible sparks of static electricity.

### Wear appropriate clothes and protective equipment such as safety glasses, face guard and gloves at all times. Otherwise it could be potentially hazardous when paint or solvent splashes on to operators

#### **A** Caution

- This CUPLA is designed for paints diluted by solvents. Do not use this CUPLA for any other applications such as Powder coating, Electrostatic coating or Electrostatic coating. The seal material will deteriorate and cause leakage As to the use of any special paint or solvent, make thoroughly sure of the material compatibility. Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage

Dink

- Connecting CUPLA directly to vibrating or impacting equipment will result in reduced lifetime.
   Use only as quick connect couplings for fluid pipelines. (It cannot be used as a swivel joint)
   Only use CUPLA in a combination with NTTO KOHK coupling "CUPLA".
   Do not disassemble CUPLA. It will cause leakage or damage.

Lock plate ASSY

# Precautions Relating to the Use of All CUPLA products

Be sure to read the "Instruction Sheet" that comes with the product or "Caution" on the package before use.

O-ring

Seal part (cross section)

# **HYGIENIC CUPLA**

### 🕂 Warning

• Any residual fluid remaining in the passage will spill out on disconnection. Drain any residual fluid before disconnection to avoid burns or injury to the skin when dangerous fluid such as chemical agent or high temperature fluid is user If the fluid comes into contact with the skin, stop the disconnecting work and consult a doctor if necessary.

#### **∧** Caution

Observe the cautions below. If not observed, it could result in burns, injury to the skin, damage to the product or other machinery when dangerous fluid such as chemical agent or high temperature fluid is used. Stop using CUPLA immediately if this happens.

- CUPLA can be easily disassembled for cleaning. CUPLA should be evaluated before use to determine the suitability with regard to sanitation and safety. Especially when using O-rings of other brands than Nitto Kohki, be sure to evaluate the O-ring at your end. Prior to use, check the compatibility of the seal material and body material against the temperature and the fluid to be used.

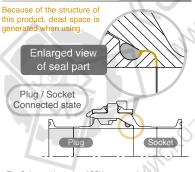

- Especially when using O-rings of other brands than Nitte Kohki, be sure to evaluate the O-ring at your end. Prior to use, check the compatibility of the seal material and body material against the temperature and the fluid to be used. Selecting the wrong seal material will lead to leakage. Use only within range of its rated temperature. May cause damage or deterioration to the sealing and leak if used otherwise. Also, do not use continuously ander any pressure exceeding the rated working pressure. This may cause leakage or damage. Use only within range of its rated temperature. May cause damage or deterioration to the sealing and leak if used otherwise. Also, do not use continuously at the lowest or highest working temperature. The durability of CUPLA differs depending on the operating environment and conditions (pressure and temperature etc.). If necessary, conduct performance evaluation test under your actual operating environment and conditions. When assembling, disassembling, do not for the disassembled parts, or put scratches on the sealing surface. It will cause malfunction or leakage. When washing to OUPLA do so with CUPLA that in disassembled state. Well ing in a sembled state will deform the parts or damage the O-ring and cause leakage. When washing to CUPLA, be as owith CUPLA that in disassembled state. Well ing in a sembled state will deform the parts or damage the O-ring and cause leakage. The outer diameter and thickness of the pips to be welded to CUPLA must conform to JIS G 3447. After welding to CUPLA, a brease polish the welded part. (Surface roughness Ra ≦ 1.0 µm recommended for the liquid contact parts. Surface roughness on the weld ine should not exceed fty=16 µm.) If it is not polished or if the surface roughness becomes rougher than the recommended value, it may potentially cause the spread of bacteria. Malfunction acused by welding (directly or otherwise) is not included in the waranty. For to leas, always perform a leak test at fafter installing CUPLA

- When CUPLA remains connected for long periods of time, it may become difficult to disassemble.
   In this case, do not forcefully turn the socket and plug to disconnect as this may damage the seal material and cause leakage.
   Do not disconnect with fluid still under dynamic pressure or static residual pressure.
   Do not drop CUPLA. It will cause leakage or malfunction.
   Always install a shut-off valve between the pressure source and CUPLA.
   Do not apply any artificial impact, bend or tension. It will cause leakage or damage.
   Connecting CUPLA directly to vibrating or impacting equipment will result in recued lifetime.
   Use only as quick connect couplings for fluid pipelines.
   Ohy use CUPLA in a combination with NITTO KOHKI coupling "CUPLA".

# **SEMI-STANDARD CUPLA Series**

Contact us separately for detail cautions for the SEMI-STANDARD CUPLA series.

- The O-ring and Lock plate ASSY are consumable items.
   Please replace the Lock plate ASSY at approximately 1,000 times connections / disconnections.
   When the Lock plate ASSY is deformed, replace it with a new one regardless of connection/disconnection times.
- The durability of the O-ring differs depending on the operating environment and conditions (pressure and temperature etc.).

# Maintenance of CUPLA

## **O-ring Replacement Procedure**

The internal O-ring is a consumable item. If the O-ring in the socket has failure such as wear and tear or deterioration, take the following steps to replace it with a new one. Always use genuine Nitto Kohki O-rings.

PMJ-1 (Small)

PMJ-2 (Large)

#### 0-ring replacement Jig Accessories for O-ring maintenance

# Grease for O-ring

GRE-M1 (Mineral grease) for NBR and FKM

GRE-HC1 (Hydrocarbon grease) for NBR and FKM

- GRE-S1 (Silicone grease) for NBR, FKM, and EPDM
- GRE-S2 (Silicone grease) for NBR, FKM, and EPDM (NSF H1, NSF 61 registered product)

# Caution for Storing CUPLA

 Store CUPLA in a place where no dust or foreign matter gets in. If fluid flows while the dust or foreign matter is present inside Store CUPLA in a place where no dust or foreign matter gets in. If fluid flows while the dust or foreign matter may go into the equipment connected to CUPLA and may cause malfunction.
 Store CUPLA indoors away from water or moisture.
 Store CUPLA in a shaded, dry and well-ventilated place.
 Do not to drop CUPLA1. will deform or damage CUPLA.
 If CUPLA are stored or not being used for a long period of time, check their appearance, function and performance before use.

CUPLA should be inspected periodically to ensure safe operation and to prevent them from a performance drop or malfunction. If there is a malfunction in CUPLA or wear and tear, please replace it with a new one. If you have any concerns, contact Nitto Kohki or the distributor from whom you purchased your CUPLA.

### How to Remove the O-ring

- Use an optional O-ring replacement Jig to remove the O-ring. Be careful not to damage the groove of O-ring with the jig. Used O-rings with wear and tear or deterioration can be removed easily with the jig.
- After removing the O-ring, wipe the groove clean with a cloth.

### How to Install a New O-ring

O-ring

• After making sure that no dust or foreign matter exists in the groove of O-ring, push in part of the O-ring and the remaining part can be easily pressed in with the jig.

2 HSP CUPLA has a backup ring. Insert an O-ring in the place as shown in the figure. If CUPLA connection/disconnection is hard and not smooth after the O-ring has been replaced, apply a little grease to the O-ring.

O-ring replacement Jig

# 2000 0

Backup ring for HSF

Press the O-ring into place with the jig.
